

High-power, high-frequency transmission

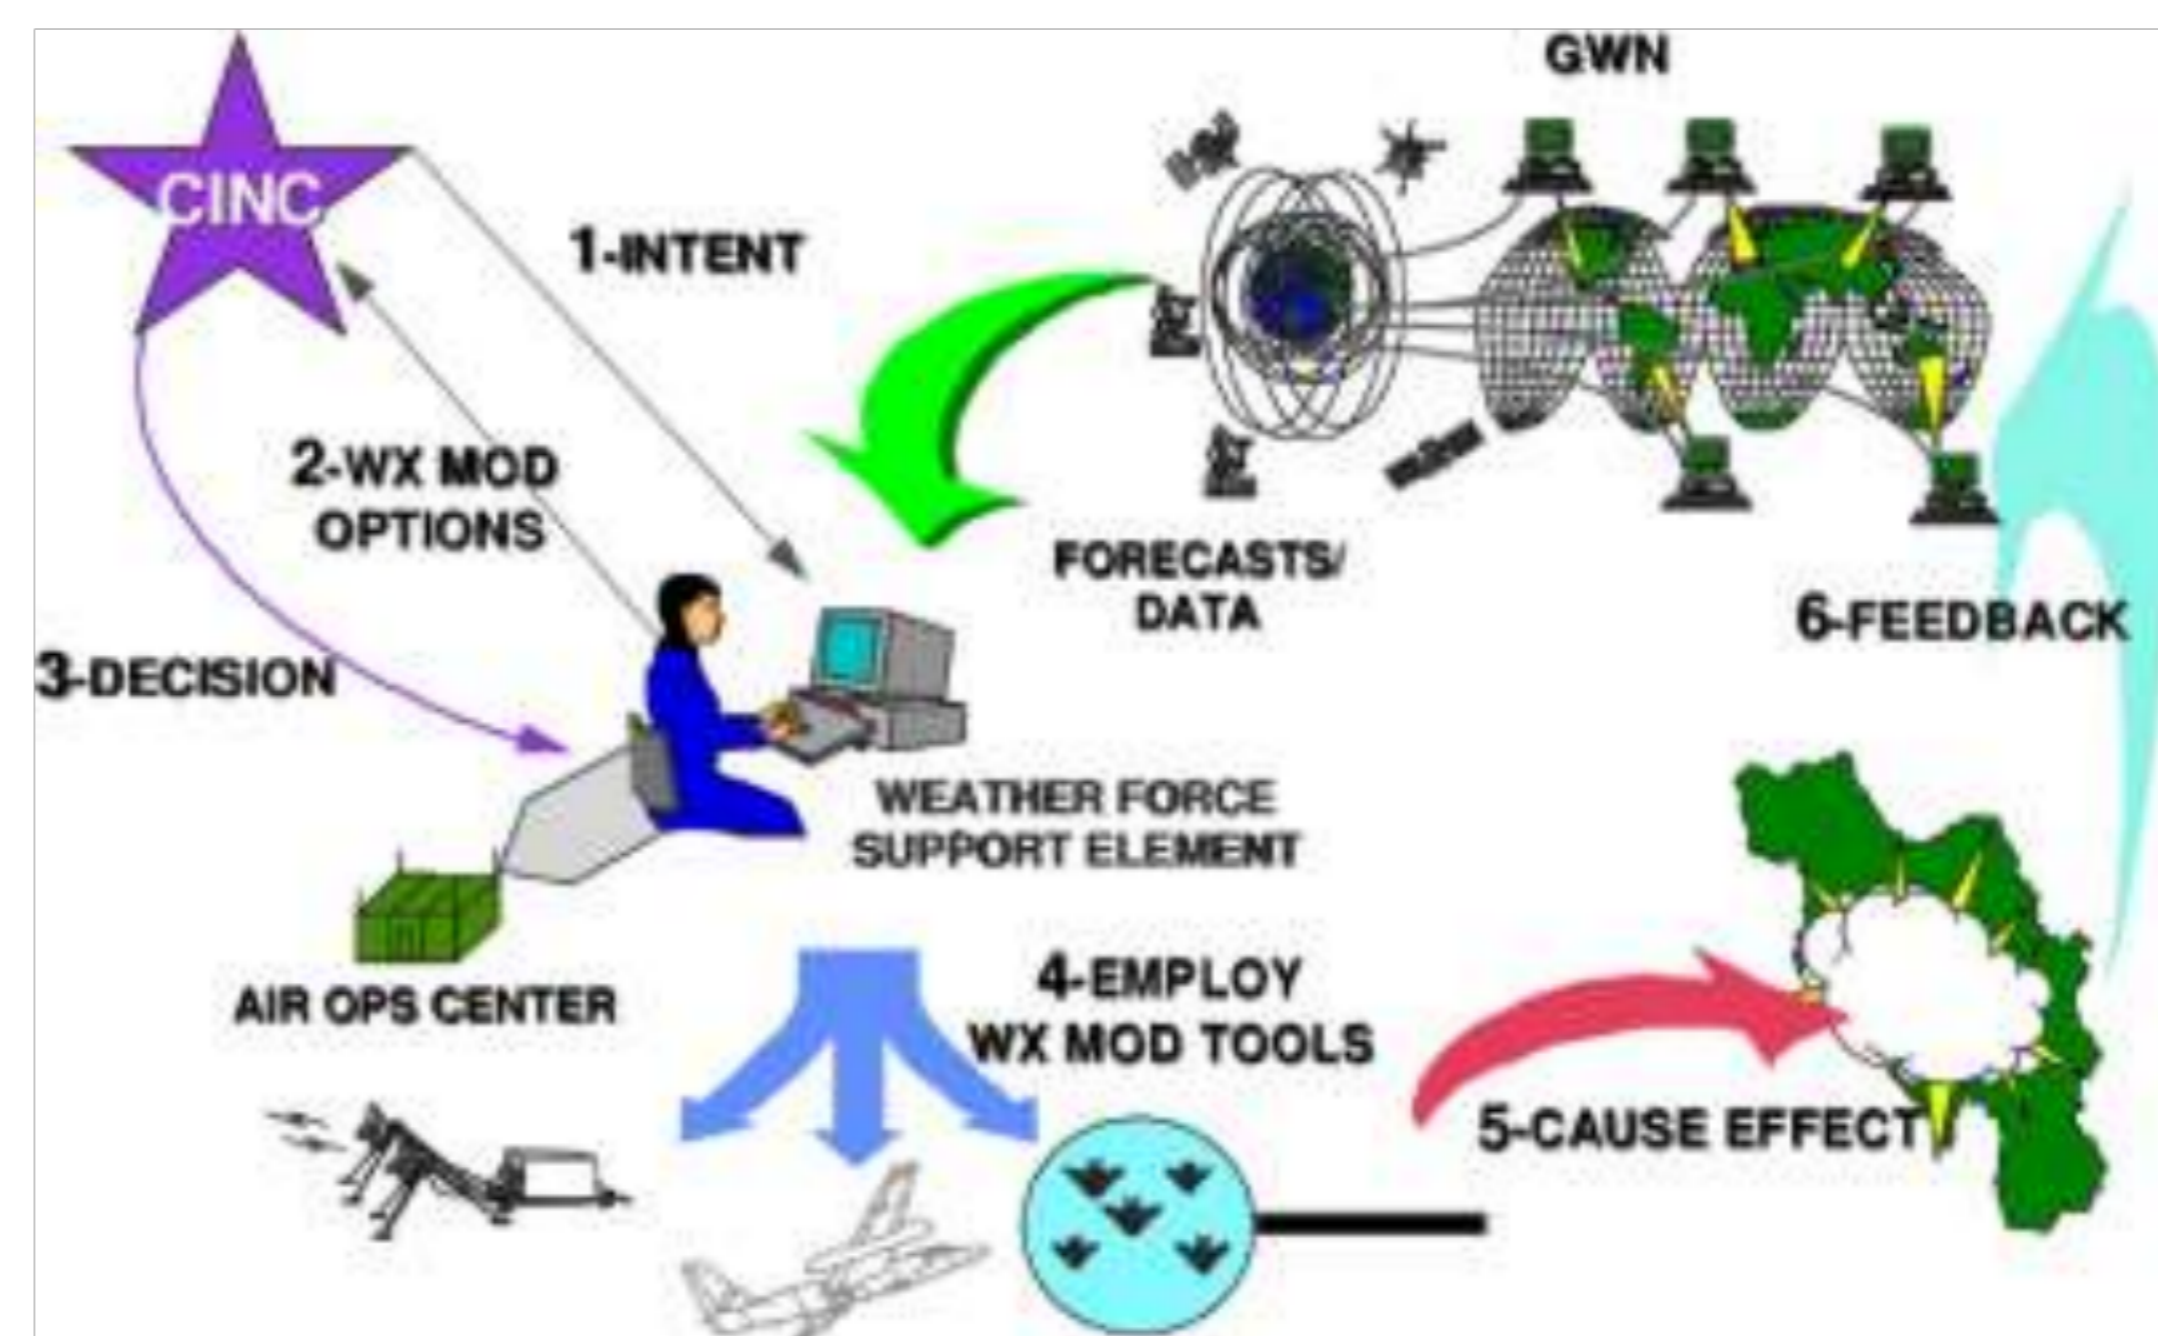

Understanding an outline of the science behind climate change (without considering the potential damage to the earth through war crimes.)

Revelation 11:18 that I shouldst destroy them which destroy the earth.

In 1996 a college paper was prepared for the US military:

Weather as a force multiplier: Owning the Weather in 2025.

The image to the right from that paper says it all. Understand the close relationship between university research and the military gives one a clear idea of the implications of these recommendations.

News item 2007 says Australian former Prime Minister Turnbull and then head of the Australian Rain Corporation pumps \$10m into rainmaking gamble. It was to develop Russian technology that aims to trigger rainfall from the atmosphere, even when there are no clouds. There were no further reports of these experiments in which the Queensland university was involved.

'In 1933, scientists found that changing the electron density in the ionosphere could alter the generation of radio signals.' That discovery eventually led to the development of ionospheric heaters to study these and other effects.

During the 1950s Australia had ionospheric heaters on the western side of Kosciusko mountain. So this has been going on for a lot of time.

High-frequency Active Auroral Research

Program (HAARP) established its research facility at Gakona, Alaska, United States in 1993. HAARP cost more than \$290 million to build. The

Ionospheric research program is jointly funded by the U.S. Air Force, the U.S. Navy, the University of Alaska Fairbanks, and the Defense Advanced Research Projects Agency (DARPA). It comprises a giant phased array radio transmitter capable of sending 3.6 megawatts of energy into the ionosphere. (The University of Alaska had performed auroral research since the 1920s, the university decided to build a range of rockets for the purpose of studying space and the ionosphere.' Not your typical university)

Radio waves drive **ionospheric** electrons back and forth in what are called plasma waves. As those driven electrons collide with each other and with background species, their temperature goes up, which is why HAARP is called a **heater**.

By using radio waves the ionosphere can be manipulated with many news reports of scientists created an artificial aurora. The artificial aurora is the same effect as using a nuclear bomb as far as the change seen in the sky and both cause disturbances in the ionosphere. Of course, the nuclear bomb is far more destructive and dramatic. But as a woman from Japan said to me when she was 5 years old, she stared at the pretty sky which the atomic bomb had created, just after the bomb went off. She was about 1 hour away from Hiroshima living in the country. She said she remembers a woman squatting down to go to the toilet and blood coming out.

Reports of scientist creating an artificial aroura as news articles in 2013 and 2015 when the Alaskan facility was handed over to the Fairbanks University.

Norway **EISCAT (European Incoherent Scatter Scientific Association)** operates three incoherent scatter radar systems measuring disturbances in the ionosphere and magnetosphere with the ability to also cause an artificial aurora. Other **ionospheric heating facilities** include HIPAS (**High Power Auroral Stimulation**) which operated from 1986 to 2007, 25 miles from Fairbanks. This one pictured I visited in Puerto Rico, **Arecibo Observatory** – the second-largest radio telescope on Earth with 300-metre-wide disc, has now collapsed in 2020. And Russia also has a powerful ionospheric heating facility.

'Neither the official delegations nor the environmental action groups participating in the Hague Conference on Climate Change (CO6) (November 2000) have raised the broad issue of "weather warfare" or "environmental modification techniques (ENMOD)" as relevant to an understanding of climate change.' **Michel Chossudovsky**neither will the Pope who is privy to thee development in warfare.

Climatic manipulations under the HAARP program (whether accidental or deliberate) would inevitably exacerbate these changes by weakening national economies, destroying infrastructure and potentially triggering the bankruptcy of farmers over vast areas. Surely national governments and the United Nations should address the possible consequences of HAARP and other "non-lethal weapons" on climate change. **Michel**

Chossudovsky Former professor of economics at the University of Ottawa and the president and director of the Centre for Research on Globalization

The aurora have been studied from space through satellites and a natural progression is take to take the projects from the ground which was raising a lot of controversy to the sky using satellites to create the artificial aurora. Prior to this rocket had also been used for this research. The Pocker Flat Research Range is located about 50 km North of Fairbanks, Alaska, and it was established in 1968.

Rockets are still being sent into the Northern Lights to study the "invisible aurora's" electric currents.

So as you can see there is a network of US installations studying the ionosphere in the Northern hemisphere and for a long time.

In 2018 Avery Thompson says 'a Group of Scientists Want to Launch a Satellite to Make an Artificial Aurora. The proposed satellite would probe the connections between Earth's upper atmosphere and its magnetic field.'

US Space Force.

This statement by Mike Pence for the Trump administration said 'Eighty percent of the nearly 2,000 satellites are civilian, providing critical communications and economic services for humanity's well-being. We need to take care of space.' Trump Signs Directive to Create a Military Space Force. February 2019

On Thursday 18 August, the sky above the Allgäu Public Observatory in southwestern Bavaria Germany August 2011, was an example of two very different phenomena: one an example of advanced technology, and the other of nature's dramatic power. Laser guided lightning strike. Lightening takes the path of least resistance and laser experimentation is perfecting this.

USA is using laser as part of their weaponry

The potential is for HAARP / Spacelab/ rocket combination to deliver very large amounts of energy, comparable to a nuclear bomb, anywhere on earth via laser and particle beams acting as earthquake bombs. As nuclear events demonstrated both by the US in project starfish and by the USSR bombs clearly had the capacity to wipe out electronic devices and their networks and the military have for year looked at preventing damage from an EMF event. It is suggested that HARRP and associated satellites could be used for the destruction of electronic systems of the enemy. In 2010 Hugo Chavez cited an alleged report from Russia's Northern fleet that said the 7.0 magnitude earthquake in Haiti was caused by the US test of an experimental shockwave system that caused weather anomalies to cause floods, drought and hurricanes. Hugo Chavez was ridiculed s crazy.

Many believe that HARRP has the potential to cause earthquakes. CIA website quotes William Cohern “Others [terrorists] are engaging even in an eco type of terrorism whereby they can alter the climate, set off earthquakes, volcanoes remotely through the use of electromagnetic waves... So there are plenty of ingenious minds out there that are at work finding ways in which they can wreak terror upon other nations...It's real, and that's the reason why we have to intensify our [counterterrorism] efforts.” Secretary of Defense William Cohen at an April 1997 counterterrorism conference.
