

The question of mRNA Vaccinations

The right to choose your health care options comes with informed consent and mandatory measures are an act of discrimination, not respecting one's right to choose. Should it not be one's right to choose optimal health? Mandating vaccinations takes away fundamental civil liberties and human rights.

How safe is gene therapy and its long-term effects in comparison to 'vaccines' (pre-covid)? mRNA vaccines are not in the category of a traditional vaccines, being closely related to DNA, an RNA therapy, therefore being in the class of DNA therapies. By using the term gene therapy, it should awaken our senses to further investigation. 'The mRNA vaccinations are a form of gene therapy, according to its definition in many parts of the world, including Europe.'

Here is a list of possible side effects from the mRNA vaccines copied from the FDA/CDC's own PDF published in 2020 before the vaccine rollout- the effects are arthritic, autoimmune, vascular and neurological in nature. Image below from FDA PDF refer to

<https://www.fda.gov/media/143557/download>

FDA Safety Surveillance of COVID-19 Vaccines : **DRAFT Working list of possible adverse event outcomes** *****Subject to change*****

It's the same old antivaccine misinformation, tropes, misrepresentations of science, and propaganda, just repackaged for COVID-19 vaccines" Let's see if that is really true with the following facts presented in point form here!

Warning: "The most difficult subjects can be explained to the most slow-witted man if he has not formed any idea of them already; but the simplest thing cannot be made clear to the most intelligent man if he is firmly persuaded that he knows already, without a shadow of doubt, what is laid before him."

Even when you present scientific studies, historical evidence, pictures, or videos to state the facts, people do not budge from their position. Their faith lays in an already held position (in allopathic social norms) and "the reasoning process is more like a lawyer defending a client than a judge or scientist seeking the truth." Their knowledge of truth is not expansive but confined -indoctrinated. "Tell him you disagree and he turns away. Show him facts or figures and he questions your sources. Appeal to logic and he fails to see your point ... Suppose that he is presented with evidence, unequivocal and undeniable evidence, that his belief is wrong: what will happen? The individual will frequently emerge, not only unshaken but even more convinced of the truth of his beliefs than ever before, " The essence of this problem starts from the earliest age with an education which is predominately memorization rather than reason, with faith (actually presumption) based on his or her education rather than rational.

Discovered in 1961, mRNA

has been studied and

understood to be a

template to build the body

proteins. 'An ***mRNA*** is

basically like a pre-form of

a protein- its sequence

codes. Nucleoside-

modified messenger RNA a

synthetic mRNA can cause

a cell to make a protein,

which in turn could

directly treat a disease or

could function as a vaccine. Having sequenced and patented Covid 19 in the USA,

vaccines were developed for COVID-19. **The vaccines developed by Pfizer and Moderna**

activate human proteins to take on "pathologic configurations."

Currently, mRNA is considered a **gene therapy** product by the FDA. Unlike certain gene therapies that irreversibly alter cell DNA and could act as a source of side effects, mRNA-based medicines are designed to not irreversibly change cell DNA; however, side effects observed in **gene therapy** could negatively impact the perception of mRNA medicines despite the differences in mechanism. In addition, because no product in which mRNA is the primary active ingredient has been approved, the regulatory pathway for approval is uncertain. The number and design of the clinical trials and preclinical studies required for the approval of these types of medicines have not been established, may be different from those required for **gene therapy** products, or may require safety testing like **gene therapy** products. Moreover, the length of time necessary to complete clinical trials and to submit an application for marketing approval for a final decision by a regulatory authority varies significantly from one pharmaceutical product to the next, and may be difficult to predict.

Cited above mRNA is a gene therapy product and considered Nanotechnology.

“Along with inactivated vaccines, **emerging nanotechnologies such as mRNA vaccines delivered by lipid nanoparticles and viral vector vaccines.. Nanoparticles and viruses operate at the same length scale—this is what makes nanotechnology** approaches in vaccine development and immunoengineering so powerful. .. Nanoparticles, natural or synthetic (*but it is usually synthetic*), **mimic the structural features of viruses .. Delivering the genetic code for in situ production of viral proteins** is a promising alternative to conventional vaccine approaches.”

Reference: ‘COVID-19 vaccine development and a potential nanomaterial path forward’

Matthew D. Shin, Sourabh Shukla, Young Hun Chung, Veronique Beiss, Soo Khim Chan, Oscar A. Ortega-Rivera, David M. Wirth, Angela Chen, Markus Sack, Jonathan K. Pokorski & Nicole F. Steinmetz Published: 15 July 2020.

1. A synthetic protein sequence is injected wrapped in lipid nanoparticles to protect its destruction. ‘The Covid synthetic gene therapy injections employ synthetic,

thermostable nucleotide sequences which are wrapped in a PEG (polyethylene glycol)-lipid nanoparticles to protect from destruction in the bloodstream and facilitate entry into the cells.' This is a synthetic that is unnatural to the body. Just as some would wish to avoid synthetics of any vitamin because these are made in labs using chemicals and processes far removed from the natural world, so there should be some caution from the outset as this is something that would be naturally destroyed by the body's natural defences because it is unnatural. An example is synthetic vitamin C with its unnatural list of ingredients (such as Coal tar, petroleum by-products, acetone, acetylene etc) can cause damage to gut flora but this is of greater consequence because the synthetic is being injected into the cell. (Most vitamins are synthetically derived.) The 'vaccine' also contains unnatural substance to the body.

2. When it comes to the eradication of disease the number one factor is hygiene! Not vaccine. Vaccine may have its place for most people ignore hygiene. But vaccine is second rate to hygiene and second rate to a healthy immune system. Would there be more vaccine hesitancy if there was informed consent. This paper covers the issues surrounding vaccine vs a healthy immune system.
3. The premise for health almost everyone can acknowledge is that the microbiome (microbes & it's virome) changes according to the conditions in which they find themselves to support life and conception or cause disease, and most important for health and body defences is the gut microbiome. Trillions upon trillions of viruses are produced by the microbiome's bacteria, parasites, protozoa, and fungi. The Virome is nature's messengers between the microbes. In order to know what side of the fence you are on in relation to treatment you need to have thought about the definition of disease. The old way of thinking was to just destroy germs but that is archaic thinking which it is the premise of modern-day treatments because of its financial success. Microbes fortify the immune system and they are not determined by taking 'inner health' probiotics. If one carefully thinks this through, we are not working from this basic premise for good health. Instead, we are encouraging a state of disease for cure. This is a second-rate method to approach disease and stated adverse health outcomes as listed above include autoimmune disease, stroke, arthritis, cardiovascular disease.

"Assessment of the virome of 8,240 healthy adults (not known to have infectious disease) living in the US and Europe viruses—42 percent of the participants tested positive for the presence of 94 known viruses. The presence of the HIV virus, the hepatitis B virus, the hepatitis C virus, and the influenza virus was found in many individuals." Puts to light the phrase 'genetics loads the gun but lifestyle pulls the trigger'. Question? Are the mRNA vaccines loading the gun?

- Are the covid mRNA vaccine as other vaccines? This class of vaccine viral vector and mRNA Vaccine has been developed over 15 years for SARS-1. With this in mind it is clear that this is not a new development and the side effects had already been studied during development. AstraZeneca uses a benign virus, viral vector or carrier (which has been deactivated) to instruct the cell to make the spike protein. A DNA message enters the cell nuclei but it is not primarily the cell's DNA unless it's a DNA shot as used in India for teens. *"While DNA vaccines offer higher stability over mRNA vaccines, the mRNA is non-integrating and therefore poses no risk of insertional mutagenesis."*

Matthew D. Shin, Sourabh Shukla, Young Hun Chung, Veronique Beiss, Soo Khim Chan, Oscar A. Ortega-Rivera, David M. Wirth, Angela Chen, Markus Sack, Jonathan K. Pokorski & Nicole F. Steinmetz Published: 15 July 2020

"Since the late 1980s scientists began playing with the idea that there could be applications for injecting DNA or RNA directly- first, in trying to development gene therapy, and more recently, in the development of what Gershoni calls software vaccines.

REFERENCE: POSTED BY: [MAAYAN JAFFE-HOFFMAN VIA JERUSALEM POST](#) SEPTEMBER 27, 2021

Despite the claims coming from India, having the world's first DNA-based 'vaccine' there are other DNA vaccines already on the market. They are just packaged differently. The AstraZeneca, Sputnik V and the Johnson & Johnson vaccines all contain DNA of the spike protein as their active ingredient. These vaccines, Gershoni explained, take the DNA of

the coronavirus spike protein and package it inside the DNA of a safe virus called Adenovirus. These vaccines deliver the gene of the spike protein via the Adenovirus that infects the human cells but does not cause any noticeable or harmful disease.” ‘Could DNA vaccines be the next tool in the world’s battle against Covid 19?’ Maayan Jaffe-Hoffman September 26 2021

5. A basic principle being promoted post -covid is; hygiene outside the body but not internal hygiene which determines the gut flora and its microbiome or the immune response and defence of the body. .0001 % of treatments worldwide would consider internal hygiene including therapies to clean the lungs as a treatment option because of the gross ignorance on this subject. It has been said ‘The overwhelming scientific consensus is clear— vaccines are safe, effective, and necessary.’ Is that a statement made when reading the possible adverse effects? Or is it just a statement without respect to the venerable? And when you become venerable what will the outcome be?
6. Is natural immunity proven to be stronger defence against disease than vaccine acquired immunity? This is relative to the lifestyle of the person and their surrounding environment. Our immune system is determined by gut flora and that is determined by standards of internal hygiene and to a high degree the quality of what is placed in the body. [“This analysis demonstrated that natural immunity affords longer lasting and stronger protection against infection, symptomatic disease and hospitalization due to the Delta variant.”](#)

Reference: ‘Comparing SARS-CoV-2 natural immunity to vaccine-induced immunity: reinfections versus breakthrough infections.’

doi: <https://doi.org/10.1101/2021.08.24.21262415>

Natural immunity: Immune memory- The CDC’s [current guidance for chickenpox](#), does not encourage those who have contracted chickenpox to vaccinate themselves against the virus. The CDC only recommends two doses of chickenpox vaccine for children, adolescents and adults who have never had chickenpox. This is important because of the close connection of sars cov 2 to herpes zoster (chicken pox) which we shall refer to again.

“Individuals who have had SARS-CoV-2 infection are unlikely to benefit from COVID-19 vaccination”

Nabin K. Shrestha, Patrick C. Burke, Amy S. Nowacki, Paul Terpeluk, Steven M. Gordon
doi: <https://doi.org/10.1101/2021.06.01.21258176>

‘In COVID-19 patients, immune responses were characterized by a highly augmented interferon response which was largely absent in vaccine recipients. Increased interferon signaling likely contributed to the observed dramatic upregulation of cytotoxic genes in the peripheral T cells and innate-like lymphocytes in patients but not in immunized subjects. Analysis of B and T cell receptor repertoires revealed that while the majority of clonal B and T cells in COVID-19 patients were effector cells, in vaccine recipients clonally expanded cells were primarily circulating memory cells.’ 2021 Apr 21

Reference: ‘Discrete immune response signature to SARS-CoV-2 mRNA vaccination versus infection’

Ellie N Ivanova, Joseph C Devlin, Terkild B Buus, Akiko Koide, Amber Cornelius, Marie I Samanovic, Alberto Herrera, Chenzhen Zhang, Ludovic Desvignes, Niels Odum, Robert Ulrich, Mark J Mulligan, Shohei Koide, Kelly V Ruggles, Ramin S Herati, Sergei B Korolov
published 2021 Apr 21

It means that the memory response of the vaccination is highly inferior to the body’s natural immune response and memory.

“In infection-naïve individuals, the second [vaccine] dose boosted the quantity but not quality of the T cell response, while in convalescents the second dose helped neither. Spike-specific T cells from convalescent vaccinees differed strikingly from those of infection-naïve vaccinees, with phenotypic features suggesting superior long-term persistence and ability to home to the respiratory tract including the nasopharynx.”

Reference: University of California May 12, 2021 ‘mRNA vaccine-induced SARS-CoV-2-specific T cells recognize B.1.1.7 and B.1.351 variants but differ in longevity and homing properties depending on prior infection status’

Jason Neidleman, Xiaoyu Luo, Matthew McGregor, Guorui Xie, Victoria Murray, Warner C. Greene, Sulggi A. Lee, Nadia R. Roandoi:

<https://doi.org/10.1101/2021.05.12.443888>

Much remains unknown about immune response and has concentrated on antibodies. But the difference between the vaccinated and natural immune response is “In COVID-19 patients, immune responses were characterized by a highly augmented interferon response which was largely absent in vaccine recipients while the majority of clonal B and T cells in COVID-19 patients were effector cells, in vaccine recipients clonally expanded cells were primarily circulating memory cells.”

Reference: 'Discrete Immune Response Signature to SARS-CoV-2 mRNA Vaccination Versus Infection'

Ellie Ivanova New York University (NYU) - Department of Pathology Joseph Devlin
School of Medicine - Institute of Systems Genetics

Is natural immune response pathogen dependant? No, it is healthy microbiome dependant and that depends on a mineral rich hygienic internal environment.

Immune response memory and defence depend on nutrients and that is delivered through internal hygiene. The immune response is nutrient dependent which is vital for immune response memory. Lymphocytes are transformed into T and B blast cells only when there is sufficient nutrient levels such as vitamin C. T and B blast cells are precursors of the effector cell in both mediated and humoral immunity.

The Australian Medical Association (AMA) has adopted the World Medical Association's declaration of Geneva, which states: "I will not use my medical knowledge to violate human rights and civil liberties, even under threat." However, earlier this year, The Medical Board of Australia and the Australian Health Practitioner Regulatory Agency (AHPRA) issued a joint directive warning members they risk disciplinary action for providing 'false or deceptive' advice or information that could undermine the national vaccination program.

Abstract [Go to:](#)

This is a Brighton Collaboration Case Definition of the term "Vaccine Associated Enhanced Disease" to be utilized in the evaluation of adverse events following immunization. The Case Definition was developed by a group of experts convened by the Coalition for Epidemic Preparedness Innovations (CEPI) in the context of active development of vaccines for SARS-CoV-2 vaccines and other emerging pathogens. The case definition format of the Brighton Collaboration was followed to develop a consensus definition and defined levels of certainty, after an exhaustive

Immune enhancement of disease can theoretically occur in two ways. Firstly, non-neutralizing or sub-neutralizing levels of antibodies can enhance SARS-CoV-2 infection into target cells. Secondly, antibodies could enhance inflammation and hence severity of pulmonary disease ...

Animal studies ... have shown that the spike (S) protein-based vaccines (specifically the receptor binding domain, RBD) are highly immunogenic and protective against wild-type CoV challenge ... However, immunization with some S protein based CoV vaccines have also displayed signs of enhanced lung pathology following challenge. Hence, besides the choice of antigen target, vaccine efficacy and risk of immunopathology may be dependent on other ancillary factors, including adjuvant formulation, age at vaccination ... and route of immunization.”

A seed is introduced into the body contaminating the microbiome that remains latent and is triggered when the immune system defences are down. This is what brings us to the point of death- a compromised immune system eventually catches up with us.

8. If ‘gain-of-function’ is related to this outbreak of SARS-CoV-2; the virulence and lethality of the virus has been increased by human interference. Such work was being carried out in a Chinese laboratory funded by the US and this research and experimentation is being carried out worldwide. In this respect perhaps we could say it is a ‘novel’ virus but it did not natural evolution. Once let loose multiple strains will continue to morph from the initial strain of the virus as experienced with the common flu. We see what started as a winter condition in the elderly has spread to all age groups and in summertime (or at any time as the vaccination cause mutation and spread) and the ‘vaccinated’ still coming down with covid and yet the same drive for more booster shots. The morphing and mutation of the virus is illustrated by the Israel case study:

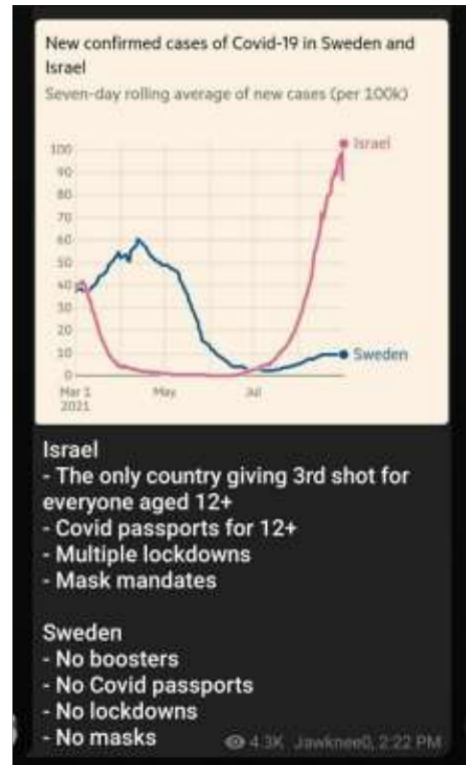

Ultra-Vaxxed Israel's Crisis Is a Dire Warning to America

“In June, there were several days with zero new COVID infections in Israel. The country launched its national vaccination campaign in December last year and has one of the highest vaccination rates in the world, with 80 percent of citizens above the age of 12 fully inoculated. COVID, most Israelis thought, had been

defeated. All restrictions were lifted and Israelis went back to crowded partying and praying in mask-free venues. Fast forward two months later: Israel reported 9,831 new diagnosed cases on Tuesday, a hairbreadth away from the worst daily figure ever recorded in the country—10,000—at the peak of the third wave. More than 350 people have died of the disease in the first three weeks of August. In a Sunday press conference, the directors of seven public hospitals announced that they could no longer admit any coronavirus patients.

With 670 COVID-19 patients requiring critical care, their wards are overflowing and staff are at breaking point. “I don’t want to frighten you,” coronavirus czar Dr. Salman Zarka told the Israeli parliament this week. “But this is the data. Unfortunately, the numbers don’t lie.”..... But in early July, with citizens over the age of 60 almost completely vaccinated, Israeli scientists began observing a worrisome rise in infections—if not in severe illness and death—among the double-vaccinated. Fully vaccinated people with weakened immune systems appeared particularly vulnerable to the aggressive Delta variant.” So, the answer to this—another vaccine right! But that’s not the answer at all. It will only prove more people venerable affected and more deaths. What we started with, is a call to protect the venerable, the ones continually put at risk. They are the very ones placed more at risk by this gene-based mRNA ‘vaccine’. To inoculate and then advocate internal hygiene is not the right position either for they are at juxtaposition. Now compare the result between Sweden where there was no lockdown and Israel.

Reference: The Daily Beast Noga Tarnopolsky August 24, 2021

Public Health
England released a technical briefing this month reporting that two-thirds of those who have died with the Delta variant in the United Kingdom had received both doses of the COVID-19 vaccine,

yet the UK is moving forward with booster shots in September. ([LifeSiteNews](#))

Some argue the point that the covid vaccines are not a drug but the point is whether necessary, beneficial and what are the side effects?

(DARPA a department

closely associated with the CIA gave funding to develop the new vaccines which would have been otherwise impossible. This was followed by private investment by Silicon Valley entrepreneurs such as Bill Gates. Also, in this integrate web is Fauci's relationship to Gates and to gain-of-function technology, as to vaccine development and the obvious side stepping of the truth by Fauci when under oath in congress. So those creating the problem present the solution. The financial gains and controls are staggering!)

There has been a growing dilemma that should have been knocked out in its inception, based on wrong theories. From "the **HIV/AIDS** hypothesis is one hell of a mistake" (said **Kary Mullins, Nobel Prize recipient- founder of the PCR test now used on SARS-CoV-2, who worked with Fauci on HIV**), to cancer treatment using harsh chemo to fight cancer caused by chemical toxins damaging DNA, to world vaccination with mutant strains being driven forward and used for the 'Great reset.' The monster has been allowed to grow out of control and fictitious ideas as in the dark ages, supported in the minds of the majority, is a false narrative or conception of disease and its causes.

Vaccines drive the mutation of the pathogen.

In a 2014 paper published in Emerging Infectious Diseases, researchers in Australia, led by the medical microbiologist [Ruiting Lan](#) at the University of New South Wales, collected and sequenced B. pertussis samples from 320 patients between 2008 and 2012. The percentage of bacteria that did not express pertactin, a protein targeted by the acellular vaccine, leapt from 5 percent in 2008 to 78 percent in 2012, which suggests that selection pressure from the vaccine was enabling pertactin-free strains to become more common. In the U.S., nearly all circulating viruses lack pertactin, according to a [2017 CDC paper](#).

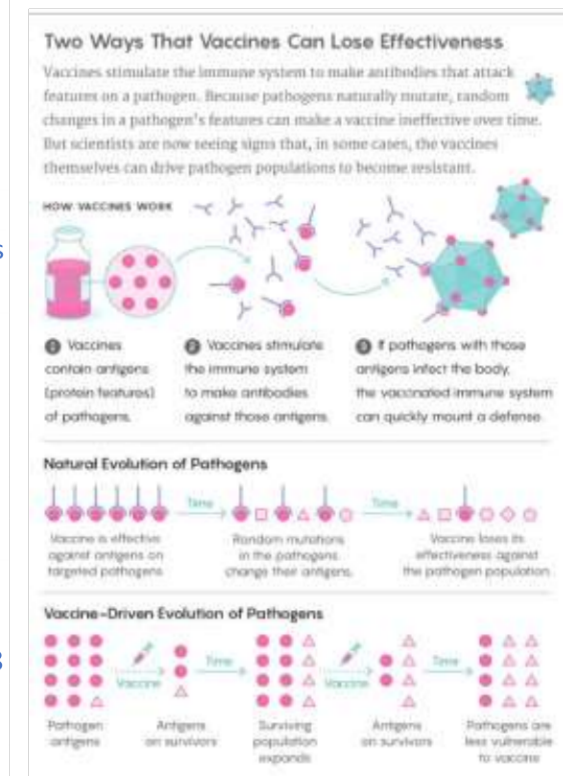

"I think pretty much everyone agrees pertussis strain variation is shaped by vaccination"
Lan said.

Hepatitis B, a virus that causes liver damage, tells a similar story. The current vaccine, which principally targets a portion of the virus known as the hepatitis B surface antigen, was introduced in the U.S. in 1989. A year later, in a paper published in the Lancet, researchers described odd results from a vaccine trial in Italy. They had detected circulating hepatitis B viruses in 44 vaccinated subjects, but in some of them, the virus was missing part of that targeted antigen. Then, in a series of studies conducted in Taiwan, researchers sequenced the viruses that infected children who had tested positive for hepatitis B. They reported that the prevalence of these viral "escape mutants," as they called them, that lacked the surface antigen had increased from 7.8 percent in 1984 to 23.1 percent in 1999."

Reference: 'Quanta magazine, immunology, Vaccines Are Pushing Pathogens to Evolve.'

Melinda Wenner Moyer May 10, 2018

Note these findings fit perfectly to the definition of disease- microbes morph themselves according to the environment in which they find themselves.

*****"Just as antibiotics breed resistance in bacteria, vaccines can incite changes that enable diseases to escape their control. Researchers are working to head off the evolution of new threats."*****

We know how antibiotics work to cause resistance so we can know that vaccines cause viral resistant strains, particularly when internal hygiene issues are not addressed.

What does main stream media have to say. The unvaccinated are the super spreaders. But it's the false tales of the media that are the super spreaders! That's ok because the media has always backed money and the status quo. The real issue is frank discussion in the community and the right to choose without coercion or discrimination.

Before the vaccine rollout those seriously investigating mRNA vaccines were reporting enhanced immune response, associated clot risks etc and as time and vaccines rolled on that's exactly what happened.

9. *It was not just one but multiple reports of adverse vaccine and deaths, from the beginning of the roll out. But according to the logic death is a worthwhile risk. Death by clots indicates the deadly potential of*

treatment, short and long-term. As with any drug there are side effects but rarely do, we see death stated as the side effect but it's stated here by the FDA. Fact checkers claim 'there is no proof that spike proteins created in response to mRNA vaccines are harmful to the body, scientists have told Reuters.'

And if it's not you who is dead, everything is going to be ok right? Wrong. Such practices (practices that elicit serious side effects) do not consider or understand the delicate machinery of the human organism. One of the first deaths reported was a Florida Doctor.

Thrombocytopenia is a medical emergency that could lead to death and became evident soon after the 'vaccine' rollout.

Thrombocytopenia following Pfizer and Moderna SARS-CoV-2 vaccination

Cases of apparent secondary immune thrombocytopenia (ITP) after SARS-CoV-2 vaccination with both the Pfizer and Moderna versions have been reported and reached public attention. Public alarm was heightened following the death of the first identified patient from an intracranial hemorrhage, which was reported on the Internet, then in USA Today [1](#) and then in The New York Times [2](#). Described below, we have collected a series of cases of very low platelet counts occurring within 2 weeks of vaccination in order to enhance our understanding of the possible relationship, if any, between SARS-CoV-2 vaccination and development of ITP with implications for surveillance and management.

The CDC in could not find a 'casual link' between covid vaccine related deaths when the science community had already documented it March 9, 2021.

Over 285 million doses of COVID-19 vaccines were administered in the United States from December 14, 2020, through May 24, 2021. During this time, VAERS received **4,863** reports of death (0.0017%) among people who received a COVID-19 vaccine. CDC and FDA physicians review each case report of death as soon as notified and CDC requests medical records to further assess reports. A review of available clinical information, including death certificates, autopsy, and medical records has not established a causal link to COVID-19 vaccines. However, recent reports indicate a plausible causal relationship between the J&J/Janssen COVID-19 Vaccine and a rare and serious adverse event—blood clots with low platelets—which has caused deaths. [Get the latest safety information on the J&J/Janssen vaccine](#). CDC and FDA will continue to investigate reports of adverse events, including deaths, reported to VAERS.

Such statements speak for themselves in light of available evidence and media reports.

26-year-old dies after one dose of Pfizer Covid vaccine

New Zealand officials announced on Monday that a 26-year-old's death has been formally linked to the Pfizer-BioNTech vaccine after he suffered a rare heart inflammation following his first dose of the Covid jab.

Dec 20, 2021 10:29

'What benefits outweighed risks for the dead NZ man and all who died from Pfizer jabs?'

Consider the number of families with dead loved ones as a vaccination side effect. We pass them off as just a small minority. Their story and tragic death remain unsung, presumably for the 'greater good'!

"The death rate is more a result of whether or not your population is immune prepared more than the particular strain of the virus."

Reference: [Denis Rancourt, PhD, Ontario Civil Liberties Association.](#)

We have no idea of the scale of deaths and side effects worldwide as they are under reported. (Note the words from the Japanese ministry- a substance that reacts to magnets- graphene which is toxic to human but a good electrical conductor. Colonel Sanders' secret ingredient)

The latest official figures (August 30, 2021) point to approximately:

38,488 mRNA vaccine reported and registered deaths in the EU, UK and US (combined) and 6.3 million reported "adverse events".

EudraVigilance and VAERS stats from US and European government agencies. It has been said that these reports are suspected adverse reactions and therefore not fact but the facts are only a small, and would say a very small fraction of the victims or families of the deceased will go through the tedious process of reporting vaccine related deaths or adverse events to the national health authorities.

10. Many were reporting and demonstrating on social media strange electromagnetic effects following 'vaccination' which was confirmed by the Japanese press. Note what it says. Your body works has a delicate electrical system and any disruption has the potential to cause neurological damage as stated by FDA/CDC as a possible side effect.

11. A very important consideration for public health is the DNA disruption with the potential to cause cancer and infertility. These were the concerns right from the beginning, the very things that Pfizer has said remains unevaluated and you consent to at your own risk. See below image->

13 NONCLINICAL TOXICOLOGY

13.1 Carcinogenesis, Mutagenesis, Impairment of Fertility

COMIRNATY has not been evaluated for the potential to cause carcinogenicity, genotoxicity, or impairment of male fertility. In a developmental toxicity study in rats with COMIRNATY there were no vaccine-related effects on female fertility [see *Use in Specific Populations (8.1)*].

Whether the mRNA vaccines are carcinogenic and cause DNA damage through mutations leading to cancer or male infertility remains unevaluated.

"The resulting changes in the fats and composition of lipids help cancer cells to thrive in a changing microenvironment by supporting key oncogenic functions and cancer hallmarks....." refer to images

mRNA-lipid nanoparticles

"Moderna's mRNA vaccine is based on a lipid nanoparticle platform, but there are many other emerging nanotechnologies for delivery of nucleic acid vaccines."

'COVID-19 vaccine development and a potential nanomaterial path forward'

Reference: Matthew D. Shin, Sourabh Shukla, Young Hun Chung, Veronique Beiss, Soo Khim Chan, Oscar A. Ortega-Rivera, David M. Wirth, Angela Chen, Markus Sack, Jonathan K. Pokorski & Nicole F. Steinmetz Published: 15 July 2020

Although a link between lipids and cancer has been known for decades, recent years have witnessed an explosion of new findings portraying a complex and intricate network of alterations in lipid metabolism in cancer that involves nearly every lipid-related pathway and biological function.

Image: Many are reporting larger breasts after receiving covid gene therapy.

A woman's inflamed lymph nodes after receiving the vaccination.

Picture: Radiological Society of North America

Cancer is found in the fatty tissue where toxins are isolated. Such evidence of reactions to the covid 'vaccines' needs to be investigated for cytotoxic effects that could possibly lead to cancer.

12. How possible are the vaccine side effects? Australian health chief **Dr. Kerry Chant** says that COVID will be with us "forever" and people will have to "get used to" taking endless booster vaccines. Remember it's not just any vaccine but Gene-based mRNA Vaccine. With the continuous booster shots the side effects become more likely. 'Ahead of a crucial meeting of the Food and Drug Administration vaccines advisory committee on Friday to discuss its booster proposal, Pfizer submitted a study on Wednesday by Kaiser Permanente Southern California suggesting vaccine efficacy wanes over time naturally, "irrespective of variant," rather than as a consequence of the Delta strain evading its jab.'

13. Does the vaccine have the potential to affect every part of the body? It has been said the mRNA vaccine with their lipid nanoparticles does not circulate widely in the body but around the injection site. Canadian immunologist Byram Bridle, Ph.D., gained access to Pfizer's biodistribution study from the Japanese regulatory agency. Pfizer's data, however, shows the mRNA and subsequent spike protein are widely distributed in the body within hours. These findings have been disputed; however, the fact remains those who experience side effects or death as a reaction to the vaccine are more than a local reaction. Have I heard of these reactions -Yes and it's the venerable people such as the indigenous community, the elderly, those with health problems who experienced fever, paralysis, clots including brain clot, no periods etc. A healthy 33-year-old woman in Bethel Park, Pennsylvania experienced paralysis 12 hours after getting her first dose of the Pfizer COVID vaccine and I personally heard a very similar report from an indigenous man in NSW. Many of these events I am certain are not reported and I know for certain reports are also dismissed.

"All of the approved Covid 19 vaccines so far used the spike protein. The spike protein is located on the outside of a coronavirus and is how SARS-CoV-2 (the coronavirus) enters human cells." The nearest lymph from the injection site makes the antibodies and from the lymph the mRNA is feed into your circulated- 40 trillion mRNA.

The biodistribution study from the Japanese regulatory agency gained by Canadian immunologist and vaccine researcher Byram Bridle PH.D as follows-

Sample	Mean total lipid concentration (µg lipid equivalent / g (or mL)) (males and females combined)

The Guardian reported (January 5th 2022) *a recent study by professor of physiological sciences Resia Pretorius “revealed that there is significant microclot formation in the blood of both acute Covid-19 and long Covid patients,”* and guess what? A year earlier **Dr. Charles Hoffe warned that the Covid gene therapy was causing micro clot formation.** <https://www.theguardian.com/commentisfree/2022/jan/05/long-covid-research-microclots>

Dr. Charles Hoffe. “Once in your blood circulation, the spike protein binds to platelet receptors and the cells that line your blood vessels. When that happens, it can cause platelets to clump together, resulting in blood clots and other side effects. The vaccines can deliver viral genes into many kinds of human cells and turn them into a factory producing the virus’s spike protein. The importance of this is: Blood flow and blood quality is our lifeline for self-repair and self-healing. A person may have undetected and unperceived mini clots that develop over time and the initial damage creating scar tissue

will not repair in certain organs. “The blood clots we hear about which the media claim is very rare are the big blood clots which are the ones that cause strokes and show up on CT scans, MRI, etc. The clots I’m talking about are microscopic and too small to find on any scan. They can thus only be detected using the **D-dimer test.**”

“These people have no idea they are even having these microscopic blood clots. The most alarming part of this is that there are some parts of the body like the **brain, spinal cord, heart and lungs which cannot re-generate.** When those tissues are damaged by blood clots they are permanently damaged.”

“We have collected a series of cases of very low platelet counts occurring within 2 weeks of vaccination in order to enhance our understanding of the possible relationship, if any, between SARS-CoV-2 vaccination and development of ITP with implications for surveillance and management.”

14. It has been stated that vaccine mRNA does not enter the cell nucleus where the DNA is. But if the viral genes carried by the mRNA vaccine could get into the nucleus through the previously unknown mechanism, there is a chance that it could alter our DNA and cause unexpected mutations.

“A leading biologist whose team recently discovered that the coronavirus that causes Covid-19 may be able to insert its genes into human DNA has said there is no cause for alarm over vaccines that mimic the process of infection.”

Reference: ‘Professor Rudolf Jaenisch and researchers at the Massachusetts Institute of Technology.’

THE CORONAVIRUS PANDEMIC

SUBSCRIBE

Coronavirus gene findings are no cause for alarm, says leading scientist

- MIT's Rudolf Jaenisch found that the coronavirus may be able to insert its genes into human DNA, but says there is no evidence that mRNA vaccines do the same
- He says the findings should not be used to support anti-vax arguments and says that even if they are found to affect human genes it would be a good thing

This finding would not belong to Covid 19 alone but to any number of diseases, whether created to make an antibody response or acquired with the potential to weaken a healthy system. Diseases known to alter DNA are AIDS and Epstein Barr virus, however **adenoviruses** such as Covid may need a rethink as to their harmful potential. Most sensible people are wary about “GMO,” even in food. Now we’re going to genetically modify ourselves?

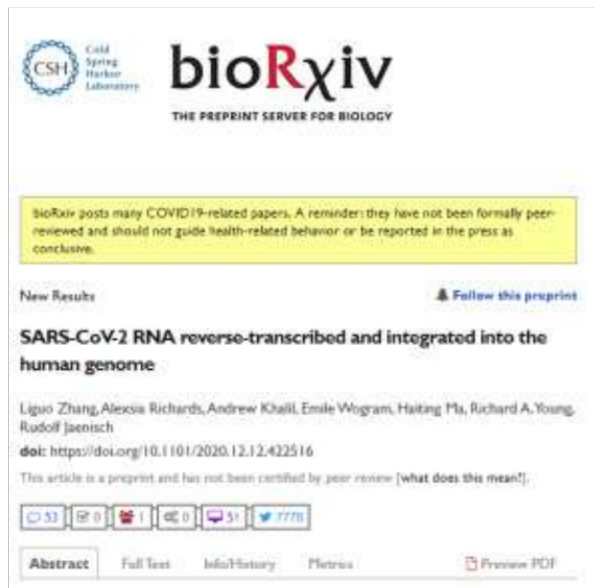

As you compare RNA with the DNA chemical composition you can see

the close similarity. Consider ‘some RNA viruses have an enzyme called “reverse transcriptase,” which begins each new viral life cycle by converting the virus’ RNA chromosome into DNA.

15. We are being introduced to the 4th industrial revolution with genetic medicine paving the way. The idea that we fight disease through changes to RNA and DNA is not relevant to many conditions that are the result of poor internal hygiene or nutrients, high sugar, high oxidated fats and oils or toxic chemical overload- the cause of the disease. In order to cure disease, one must think from cause to effect. Even more fundamental to the problem is the gross ignorance as to what internal hygiene actually is. The body is constantly checking and repairing DNA and needs the right material through what we eat and the atmosphere for our DNA to be right. **KEY: Just as hygiene prevents disease outside the body so internal hygiene is fundamental to preventing disease.**
16. Many do not understand how a drug functions. People think however that because they survived and didn't die from the mRNA vaccine, it is safe because they experienced no harmful effect. Such thinking is plain ignorance on how a drug affects different groups. Because mRNA vaccines are being used it is having a more potent, direct effect on the body because of the mechanism it works by- directly into the body cell. By definition it is a gene-based drug specified by the side effects listed.

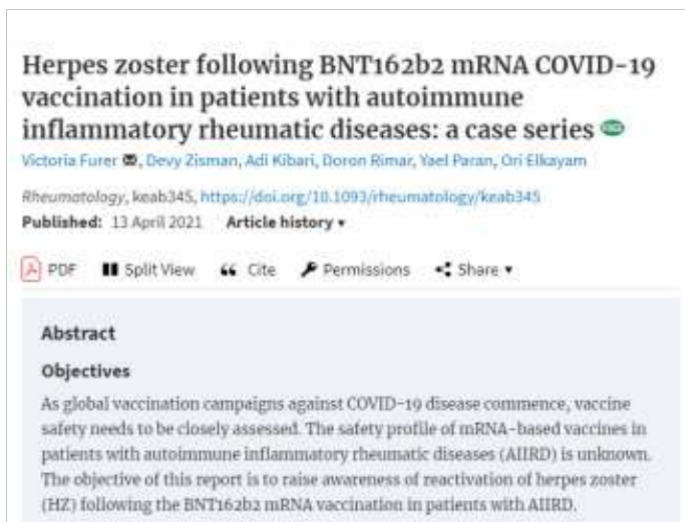

Here is how a drug works- standard drug for diabetes II, metformin. Metformin will cause gut intolerance for a portion of patients but for most no GI problem and for another group it will cause irreversible neurological damage after 5 or perhaps 10 years-

peripheral neuropathy. So, for some people the drug causes B12 depletion and neurological damage; the very thing that the patient thought the tablet was meant to prevent- diabetic related complications. The real problem was oxidated oils and fats blocking insulin action within the body and causing artery wall damage. Another example is Parkinsonism which can be caused by antipsychotics and gastrointestinal drugs (in fact a considerable list of drugs.) The point is that the drug causes a chemical imbalance that will be a lifetime disability changing the form and location of the disease and at a later stage coming back with greater ferocity. 99% of the time there is no informed consent (as is the case with Metformin causing neuropathy) and little informed consent of side effects as stated with the current Gene-based mRNA Vaccines. The message by authorities is the vaccines are safe and effective but that's not what the FDAs/ CDC's list of side effects states. Informed consent provides choice. Most do not understand the delicate machinery of the human organism or else they would not introduce into the system a seed crop that will never lose its destroying properties throughout the life of the patient. The seed remain until a venerable point which is opportunistic for another disease to arise. Most people will never realise where the disease is really coming from and a lot of them are chemical imbalances and poor hygiene.

'Antivax' is a term used to ostracize people. Someone who has any intelligence or regard for their life and the life of others will be *determined to know*, in straight English, the *name*, nature and effects of everything introduced into their system.

17. Does that which enters the system ever leave the system?
No. It remain in the system as a 'seed'. When the immune system is compromised the disease returns but has changed form and location. Chickenpox presents as Shingles or Bell's Palsy for example. Chickenpox is a very appropriate example as herpes infection (chicken pox) is linked to COVID-19 vaccine, where risk increases among people with autoimmune inflammatory rheumatic diseases.

Conclusion

Epidemiologic studies on the safety of the mRNA-based COVID-19 vaccines in patients with AIIRD are needed to clarify the association between the BNT162b2 mRNA vaccination and reactivation of zoster.

Victoria Furer, Devy Zisman, Adi Kibari, Doron Rimar, Yael Paran, Ori Elkayam Rheumatology, keab345, <https://doi.org/10.1093/rheumatology/keab345> 13 April 2021

18. Will foods and herbs naturally boost immunity? Yes. Garlic is a well-known immune booster, as is ginger and cayenne. These are examples only and not the approach to treating covid though they may assist but to make the following point. The drug companies study the herbs in parts per million as shown in the image. This is where they get their material from and take the active. See the images. This is not a complete dissection of garlics actives because the information is many pages long describing antibiotic, antitumor, anti-inflammatory properties on a scientific basis. Herbs are often described as 'quackery' which really show gross ignorance in their powerful potential without

Allium sativum var. sativum (Liliaceae) – Garlic

Active

ADENOSINE Bulb
 Analgesic; Antitumor; Antithyroid; Antidiabetic; Antimutagenic; 300 mg/kg qid poe;
 Antihypertensive; Antihyperlipidemic; Antiproliferative; Antischistosomal; 20–250 mg/kg/im;
 Anticardiac; Glucosinolate; Hypochlosterolemic; Hypoglycemic; Hypotensive;
 Immunomodulator; Insulin; Laxative; Lipolytic; Myocardial; PAF-Inhibitor 0.024 mg/kg
 IC50=80 nM; Pyrogenic 0.05 mg/kg bw two, Esophagomutagen; Saccharin; Sedative;
 Vasodilator

AJOENE Bulb
 Antitumor; Antibacterial; MIC=15–150 µg/ml; Antiinflammatory; Antischistosomal; 40 nM;
 Antischistosomal; Antimalarial 1.0 mg/kg; Antimutagenic; Antimutagenic; Antimicrobial;
 Antiproliferative; Antiprostaglandin; Antitaphylococcal MIC=27 µg/ml; Antithrombotic;
 Antitumor; Antiproliferative; Antitumor; MIC=27 µg/ml; Antitumor; Antitumor;
 Cytotoxic; Fungicide; IC709=100 µg/ml; Hypochlosterolemic; IC37=72–214 µg/ml; Lipolytic;
 Lipocycloxygenase-Inhibitor; Pesticide; Prostaglandin; Trypanocidal

ALLICIN Bulb 1,500 – 27,600 ppm
 Alcohol-Dehydrogenase-Inhibitor 500 nM; Alkylating; Anesthetic; 30 µg/ml; Anthelmintic;
 Antitumor; 1–1 nM; Antithrombotic; 0.05–0.1 mg/kg oral two; Antibacterial 500 µg/ml
 MIC=27 µg/ml; Antibiotic; Anticholinesterase 500 µM; Antidiabetic; Antiflu; Antiparasitic;
 Antiproliferative; Antiproliferative; Antiproliferative; Antiproliferative; 311 nM; Antiproliferative;
 Antiproliferative; Antitumor; Antitumor; 1.0 mg/kg; Antiproliferative; Antiprostaglandin
 IC67=10 nM; Antitumor; 1.0 mg/kg; Antitumor; Antitumor; Antitumor;
 Antitaphylococcal MIC=27 µg/ml; Antitaphylococcal 0.03–0.1 mg/kg oral two; Antitumor;
 Antiviral; Apoptotic 311 nM; Calcium Antagonist; IC50=55 µM; Cyt; Candida MIC=7
 µg/ml; Cyclooxygenase-Inhibitor; Fungicide; Gram+; 8–12 ppm; Gram-; Insulin;
 Hypotensive 200 mg/kg/day; 100 doses a day; Hypochlosterolemic 0.05–0.1 mg/kg oral
 two; IC75=72–162 µg/ml; Hypoglycemic 0.1 mg/kg; Hypochlosterolemic; IC50=10 nM;
 Immunomodulator; Insulin; Insulin-Sparing 100 mg/kg/day; Laxative; Lipolytic 4–6
 mg/kg; Lipocycloxygenase-Inhibitor ED7=25 µg/ml; Macrolactone; Nematocidal; Papain-Inhibitor
 500 nM; Pesticide; Phagocytosis; Prostaglandin-Synthetase-Inhibitor; Succinate-
 Dehydrogenase-Inhibitor; Trichomonocidal; Urinary-Inhibitor; Vibriocidal; Xanthine-Oxidase-
 Inhibitor

ALLIIN Bulb 5,000 – 10,000 ppm
 Antitumor; IC100=40 µg/ml; Antibacterial; Antibiotic; Antidiabetic; 200 mg/kg;
 Antihypertensive 0.5 µg/ml; Antimutagenic; Antitumor; Antiparasitic; Antitumor;
 Antitumor 1–3 mg bw rat; Antithrombotic; Antitumor; Hypochlosterolemic;
 Hypoglycemic; Immunostimulant; Lipolytic 200 mg/kg oral rat 7–11 mg/day; Pesticide;
 Phagocytosis

ALLISTATIN-I Bulb
 Antibacterial; Pesticide

ALLISTATIN-II Bulb
 Antibacterial; Pesticide

ALLIXIN Bulb
 Anticancer; Antitumor; Antipromoter; Antitumor; Chemopreventive

side effect while maintaining internal hygiene. The drug companies have a run down on most of the herbs used. Point is natural means are known to have a powerful effect in fighting disease but are not profit driven and therefore are not favourably used.

Actives

Antiaggregant; Antibacterial MIC=55-150 ug/ml; Antiinflammatory; Antileukemic 40 uM;	
Antileukotriene; Antimalarial 50 mg/kg; Antimetastatic; Antimutagenic; Antimycotic;	

19. Certain oils have therapeutic properties. **Scientists believe a new eucalyptus-based treatment may be more effective than antibiotics against dangerous hospital 'superbugs', says Patrick Barkham** "Trials undertaken by a University of Sydney team discovered that the mixture of eucalyptus, tea tree, lemon, thyme, cloves and alcohol cured staphylococcus aureus, or "golden staph" infections, on two-thirds of hospital patients, where conventional antibiotics were ineffective." The fragrance of the pine, the cedar, the fir and the eucalyptus, those native species that dotted the continent when first discovered have therapeutic properties. When blood is directed to an area to heal, as well as cleaning the lungs from viral toxins we have in part a successful treatment for a lung problem. At what point has internal hygiene of this nature been used- not at all.

20. **'Fresh air** will prove far **more** beneficial to sick persons **than** medicine, and is far **more** essential to them **than** their **food**.' The basics; that is fresh air movement through hospitals and nursing homes have not been considered by health agencies.

21. Health as choice. A person can choose to smoke or live a healthy life. People choose to live a healthy lifestyle or use drug medications to ease the pain they experience because they choose not to change their lifestyle but it's a matter of choice. Why should a person with good health and with that comes the healthy gut flora be forced to compromise their personal integrity to chance one of these possible mRNA vaccine side effects?

Many people are taking the vaccinations against their better judgment or choice, for the sake of their jobs, because of mandates. Such will result in health problems, with 9 out of ten diseases having their origin in the mind. This can have a damaging physiological effect.

Image: Guillain-Barre possible

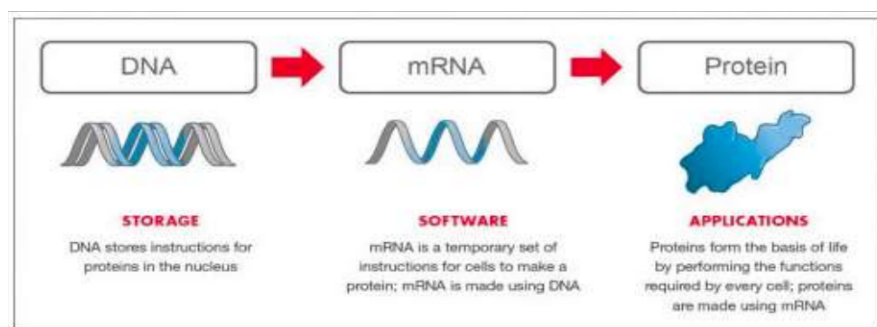

side effect of gene therapy indicating its harmful effect as a drug.

22. How does the treatment we are considering affect blood flow and the quality of that blood thus affecting the gut flora? Does it fit into the cycle of life? Viruses support life and are injurious in an unhygienic environment be it internally or externally, thus allowing the recycle processes of life to continue to support life while dealing with waste matter and regenerating new life. Our self-healing potential comes from the environment from which we are made and the hygiene that surround those environmental factors.

Choose to live a healthy lifestyle which is plant based and oil free as much as practical or choose a vaccine; but to say vaccination is the only way to community health is not factual. United Nations says world leaders 'have a moral obligation to go vegan' to avert climate catastrophe, while supporting vaccination mandates- this is contradictory. To make this a little more obvious- microbes from diseased animals often through pesticides and chemical residues or through eating scavengers, enter the body and form the microbial community and allow disease. So, advocating pure veganism is great but at the same time mandating mRNA vaccines for health is just wrong.

It is interesting that Moderna markets its technology as the software of

life but it fails to recognise the basic determinants of life considered in all life cycles. It does not recognise the basic premise of disease that determines life or death.

Pfizer does not have a history of being a company with integrity having settled the largest fraud settlements in history in 2009.

“The largest health care fraud settlement in Department of Justice history; largest criminal fine of any kind imposed in the U.S.; largest ever civil fraud settlement against a pharmaceutical company. The case against Pfizer and its subsidiary Pharmacia & Upjohn (Pharmacia) primarily involved so-called off-brand promotion of several drugs, notably the anti-inflammatory drug Bextra.

‘Indeed, it was company employees who blew the whistle about off-label marketing—and kickbacks to physicians, who were paid to prescribe certain drugs—that first brought the case to our attention in 2005.’”

It would appear that the FDA (which is a private organization just like the federal bank of America) acting on behalf of Pfizer sort to prevent the release of documentation on the their covid vaccine till the year 2096 which a judge has ruled out but don't expect any transparency soon. Reference: <https://www.rt.com/news/545350-fda-pfizer-vaccine->

Judge rules FDA can't keep vaccine docs secret 'until 2096'

Judge rules FDA can't keep vaccine docs secret 'until 2096'

The US Food and Drug Administration (FDA) has been ordered to hasten the publication of documents related to Pfizer's coronavirus vaccine by more than one-hundred-fold, after the agency claimed the disclosure would take decades.

Jan 7, 2022 05:29

"New York Attorney General Letitia James said in a statement that "the opioid epidemic has wreaked havoc" across the nation and that "Johnson & Johnson helped fuel this fire." James said her focus remains "getting funds into communities devastated by opioids as quickly as possible." Johnson & Johnson said the settlements were consistent with its prior agreement to pay \$5 billion to settle opioid claims by states, cities, counties and tribal governments nationwide. The company and the largest U.S. drug distributors – AmerisourceBergen Corp., Cardinal Health Inc. and McKesson Corp. – have proposed paying a combined \$26 billion to end thousands of opioid lawsuits.

Johnson & Johnson Johnson & Johnson has also been appealing an Oklahoma judge's 2019 ruling that the New Jersey-based company pay that state \$465 million for its deceptive marketing of opioids." And in fact, Johnson & Johnson were able to overturn the ruling.

Johnson & Johnson agrees to pay \$263 million in New York opioid settlement

WFD2022 / By Susan Barton

Johnson & Johnson on Saturday, June 26, agreed to pay \$263 million to resolve claims that it fueled an opioid epidemic in New York state and two of its largest counties.

The settlements removed the pharmaceutical company from a jury trial that started Tuesday, June 29, on Long Island, New York. Several big opioid makers and distributors are also

23. Perhaps because of lack of investigation many are ignorant of the words of Nobel Prize recipient Kary Mullins who invented the PCR test and had worked with Anthony Fauci on HIV. Mullins campaigned hard to stop PCR being used as a diagnostic test for HIV. He said the PCR test was not designed and should never be used on

Though the whole world relies on RT-PCR to "diagnose" Sars-Cov-2 infection, the science is clear: they are not fit for purpose

From Torsten Engelbrecht and Konstantin Demeter

Lockdowns and hygienic measures around the world are based on numbers of cases and mortality rates created by the so-called SARS-CoV-2 RT-PCR tests used to identify "positive"

infectious disease period. Note what the Bulgarian Pathology Association have to say. Refer to image. Mullins stated you can virtually pick what you want out of the PCR test because it was never designed to determine an illness. This comes on top of the world-wide occurrence of flu magically disappearing and covid replacing it. China's BGI, launched a new PCR test that can simultaneously test for influenza A, B and corona, BGI's explains that influenza A, B and covid *are difficult to distinguish from each other*.

"BGI's new CE certified 3-in-1 test For SARS-CoV-2, Influenza A and Influenza B provide clinicians and doctors with a reliable single-panel test to help quickly and accurately diagnose patients.

Flu and COVID-19 are similar in symptoms and hard to

differentiate. A positive result for one disease does not mean you are free from others. You have to test it all to be sure.

Combine multiple tests into one give you a great advantage during the flu season."

24. If you are infected with covid a huge number of spike proteins gets into your system and if you receive a vaccination the consequences are the same- a huge number of spike proteins enter your system. So, what does the system need either way? A thorough cleansing through plant-based foods, air quality, assisted blood flow- internal hygiene with a natural immune response. 'We've made vaccinations free, safe and convenient.' Says Biden but nothing is for free.

Take away health principals-

- Rational sense determines treatment rational.
- Treatment should be a natural progression from understanding the fundamentals that cause disease.
- The life is determined by the blood for its self-healing; that is blood flow and blood quality.
- Blood flow and blood quality requires a clean microbiome for self-healing.
- Is the therapy or treatment I am choosing creating a clean microbiome? Or side effects that are have a disease potential?
- The body like a car works off multiple factors that determine our defences not just one thing. Not just vaccines or a magic drug- this I go into greater detail elsewhere but the more we simplify and head towards plant based the better the results. The oil, the air, the water has to be right just like a car. And like a car there are certain laws that we need to work by for self -healing otherwise the car will run rough and breakdown. Like electricity by which we function there are certain laws that promote self-healing, (self-maintenance) a strong immune response and barrier.
- A clean microbiome determines the immune response.
- A seed such as covid or herpes zoster remains in the delicate machinery of the body dormant until the body is compromised. "Genetics load the gun, but **lifestyle pulls the trigger.**" We can trigger a healthy life or serious illness. Genetic weaknesses are triggered by poor life choices. Consider the 'vaccine' as one of those choices sometimes pulling the trigger for an adverse effect or even death.
- Microbes allow disease to change form and location that is the nature of things to direct the cycle of life.
- The argument that risks are acceptable yet who can accurately determine when and what will occur, the nature or severity of the disease after the foundation has been laid. It is playing with the natural life-giving microbiome and setting a weak-link in the armour to arise at a later time.
- Rational medicine is self-evident, for example many people have experienced chicken pox and it is known to have complications such as Bell's Palsy or shingles down the line. Cancer is another example where after treatment it often returns with more deadly ferocity. So, the seed introduced ever remains until germination.
- Viruses are messengers in the cycle of life that instigate and promote life or cause degradation thus fulfilling the cycle of life.
- Genetic information is both environmental working on the horizontal plane and becoming part of our genetic code and secondly integrates at a vertical level, being passed down the line to future generations.
- Of paramount concern is nanotechnology being used to 'hack the software of life.' It bypasses natural body defences and we are told to accept this as responsible health.

- A good 'vaccine' (according to its traditional purpose) should stop you getting the clinical disease and blocks transmission to other people. This is not happening. You are not safer for having been inoculated and can easily be reinfected with its risks.
- Like antibiotics where germs become antibiotic resistant so vaccine resistance leads to mutations with new strains becoming problematic. This was known long before covid arrived.
- How safe is gene therapy and its long-term effects in comparison to 'vaccines' (pre-covid)? Gene therapy is the correct and more responsible term for treatment which is more invasive.
- Covid 'vaccines' appear to have unusual electromagnetic properties which some have identified as graphene. Whether it is Graphene which is toxic to humans or not it certainly has an unnatural effect on the body..
- Invasiveness of mRNA treatments to recode cell activity requires faith in the trustworthiness of corporations such as Pfizer and the science that in fact might well be presumption.
- There should be a God given right to choose your health options.
- It is a sacred trust to protect life by attending to our own health while warning others of the issues that may affect their health and happiness and prevent loss of life.
