

The Inconvenient Truth of Weather Modification

PART 1 of 2

One of the most important areas of modern history for the general public to understand are the advancements in weather modification and its use in the climatic changes seen today. 'There will be a universal bond of union, one great harmony, a confederacy of Satan's forces as He desires to embrace the whole world in his confederacy.'

LEADING UP TO THE POST WWII ERA

1776 The Illuminati founded by Jesuit trained Adam Weishaupt in Bavaria, today part of Germany, a professor of Canon Law and practical philosophy at the University of Ingolstadt in 1773. The French revolution started because of lack of food and economic problems engineered by the Jesuits. It embraced communism with the aim to abolish Christianity and in its place establish a utopian science republic. After the illuminati revolutionary plot was discovered, it was disbanded but continued under the form of many names such as 'skull and bones,' Rosicrucians, Bilderberg Group and so on. Secret societies would initiate talented students from the universities.

Paris became one vast almshouse, and it is estimated that, at the breaking out of the Revolution, two hundred thousand paupers claimed charity from the hands of the king. The Jesuits alone flourished in the decaying nation, and ruled with dreadful tyranny over churches and schools, the prisons and the galleys." {GC 279.2} The world-wide dissemination of the same teachings that led to the French Revolution--all are tending to involve the whole world in a struggle similar to that which convulsed France. {Ed 228.2}

repeatedly people have commented on the similarities of movements in the USA to the French Revolution.

1861 American civil war: Confederate general 33-degree mason Occultist Albert Pike tells us that free masonry 'aided in bringing about the French revolution.' In his book given to freemasons at the 14th degree, 'morals and dogma' reveals Lucifer as lord.

1896 scientist Nikola Tesla electrifies the city of Buffalo from the power of Nigeria falls being the first hydroelectric plant to produce AC power. Tesla Coil patented in 1891 lead to the idea of wireless transmission. His ideas included harnessing an infinite source of energy that was wireless and freely available. This work was carried out in Long Island at the Wardenclyffe Tower but Tesla ran out of funds as his backers such J P Morgan would not continue to fund the project which sent him broke. He made important contributions to radio transmission and at least 300 patents for various inventions. Nikola Tesla died a poor man when it is said he might have been the world's first billionaire. If we compare the Rothchild's dynasty of wealth and monopolistic control through banking and the service of this man for humanity, there is no comparison. His scientific work would led to the modern age and the development of weather warfare.

1921 Council on Foreign Relations. Financiers and lawyers goal of preparing the American public for a new world order, and how it is working to accomplish that goal through the control of America's foreign policy apparatus.

1927 Big Bang theory **George Lemaitre** gives the world the Big Bang theory. Science follows this directive building on the work of Darwin. The **Jesuit priests' formula came from Aristotle cosmology. The building of theology is on Greek Philosophy and Darwinism. This piece of evolution science delivered by the Jesuits is the backbone of scientific endeavour today.** The idea is that we can improve on nature rather than working with God's natural laws.

The School of Athens
by Raphael, at the Vatican
Museum

Attempts to alter the weather have always been around. 1890s in USA people tried using dynamite to make it rain.

The evolving science of war on humanity

This is but a small sample of the extent that weather warfare is being carried out in the planet. If one was to research the history and activity of 50 countries in weather warfare development including Russia and Iran or Germany or Japan it would be an incredibly long volume of work. Here I also touch on some of the ideology behind the scenes.

1906 Charles Mallory Hatfield “moisture accelerator” (a sewing machine salesman) told the San Diego city councillors that he could have the Morena Reservoir only one-third full at the time overflowing within a year with an agreed contract of \$10000. He had gained a reputation in California over the last 10 years prior. He mixed chemicals in a 20ft to 30 ft tower and let them evaporate. The rain was so heavy in San Diego Lower Otay Dam burst and people were killed in the old river valley and also stock, farms and railways damaged. Hatfield did not receive his money for fear of being sued. That encapsulates weather

manipulating history that follows. It is not an exact science and can easily have an adverse effect, therefore the details of weather modification are not shared with the public.

1932 USSR The Kharkov Hydrometeorological Institute, which was transferred in 1944 to Odessa, was founded in 1932 with specialists in meteorology, geographers and physicists. Moscow Hydrometeorological Institute (transferred in 1944 to Leningrad), and the Vladivostok, Moscow, and Rostov hydrometeorological technical colleges. The Kharkov Hydrometeorological Institute, which was transferred in 1944 to Odessa, was founded in 1932.

CIA reports on USSR operations as follows. Cloud seeding from 'aircraft was judged to be inadequate and anti-aircraft artillery shells and rockets were developed for this purpose', and 'claim that the shells fragment completely and it is rare to find a piece as large as one gram on the ground. The danger of the rockets is minimized by the use of parachutes and the rocket sites are established in relatively unpopulated areas.' As many as '300 secret weather modification experiments done in the Arctic. One plan, by engineer P.M. Borisov, was to pump water from the Atlantic to the Arctic Ocean. Borisov believed that all the ice in the Arctic Ocean could be melted within three years, never to return.'

[Washington Post](#) JACK ANDERSON & DALE VAN ATTA October 27, 1989

1944 Fred Terman electronic warfare Stanford university— School of Engineering dean, provost and early Silicon Valley advocate. Fred Terman (1900-1982) was dean of the School of Engineering at Stanford from 1944 to 1958 and university provost from 1955 to 1965. **The evolution of microwave technology ultimately to wage war on the world!**

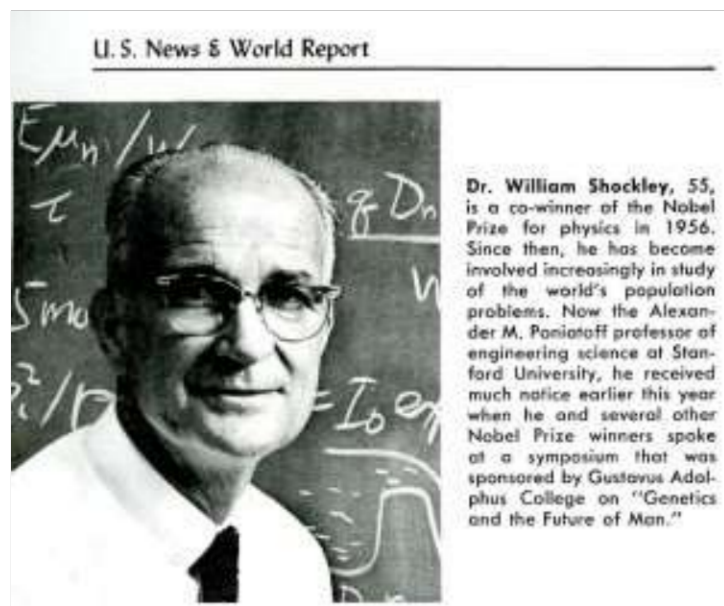

Harvard radio research lab ran all electronic warfare in WW11. This was directed by the father of electronic warfare- Frederick Emmons Terman who was a Stanford university engineer 1926 also the Father of silicon valley. It was this man who encouraged his students William Hewlett and David Packard to start their companies.

Terman recruits 11 former radio research lab personnel into the Stanford university where they set up a new lab and naval department gives them their first contract in research into microwaves. In the 1950's the engineering department becomes also involved. The Korean war and the cold war era led to doubling the size of Stanford electronic departments. (The USA was two weeks from a set date to drop an atomic bomb on Korea.) Stanford become a full partner with the military and NSA, CIA etc. Cold war was an electronic war- track and monitored behind closed walls.

Silicon Valley started to participate in electronic surveillance system to go on planes using microwave technology @150- 140,000 Mz. Stanford designs/ Silicon Valley built.

Terman becomes "Chief Academic Officer" or provost in 1955 and systems engineering lab emerges. Advances research & development for NSA & CIA throughout the cold war. He encourages students to leaves and start companies and professors to consults for companies and become part of company boards so that technology transfer becomes easy

and licensing became easy. Others were led to start companies and the researchers would sit on the company boards. Silicon Valley explodes with companies doing microwave research and development work.

Shockley's attempts to commercialize a new transistor design in the 1950's and 1960's also led to California's Silicon Valley. Shockley had worked on air ground radar during the WW11.

USA become big on radio astronomy which was in fact was used to pick up Russian signals. You see all our most recent communication convinces and technology is built literally on human warfare and death. The first satellites were electronic intelligence built by the US Naval Research Department (NRL) project GRAB after United States U2 spy planes was shot down over the Soviet Union airspace.

As we shall see, microwave would figure heavily in weather warfare.

1945 United Nations is formed following the end of WWII by the representatives of 50 countries. Franklin Roosevelt sought to convince the public to become part of the UN. The wartime US president became an Honorary Grand Master of the Order of DeMolay in a ceremony that took place at the White House.

1946 Bill Donovan founded the CIA (former head of the Office of Strategic Services OSS) "Wild Bill" Donovan, had been received in audience by Pope Pius XII and decorated with the Grand Cross of the Order of Saint Sylvester, the oldest and most prestigious of papal knighthoods.' The Vatican seeks Donovan's advice to stop the threat of communism in Italy and in return for using Vatican Bank to launder money for the CIA's clandestine operations which was often from the heroin business. From the 1940s the CIA had a seat at the Vatican with insight to important military secrets and documents. [See Operation Gladio by Paul L Williams.](#)

1946 A chemist for General Electric, Vincent Schaefer made the first snowstorm in a laboratory freezer.

1946 UNESCO formed to shape a single world culture. Creating knowledge, educating and communication on climate change. It is a United Nations Educational, Scientific and Cultural Organization. Its founder was a fervent believer in Darwin's theory of evolution, 'Sir Julian

Huxley wrote in UNESCO: Its Purpose and Its Philosophy that "**political unification in some sort of world government will be required.**"

The success of the teacher in bringing up his pupils to be good citizens of the world. ... As long as the child breathes the **poisoned air of nationalism**, education in world-mindedness can produce only precarious results. ... For the moment, it is sufficient to note that it is most **frequently in the family that the children are infected with nationalism.**' We think of UNESCO preserving world heritage sites but it is to **educate the public and change nationalistic institutions.** Always think the opposite of what is being presented. It presents as cultural preservation but it actually sets out to destroy local culture for an international set of values. Let me point out that the main target was the USA for its power lay in separation of church and state as a free and independent nation rather than an interdependent nation being the cornerstones of Western democracies.

1947 Project Cirrus: The idea of weather modification was played around with during WWII and directly following the war the US military (the army, navy and air force) together with the United States Weather Bureau attempted to modify a hurricane that was travel from the West to the East and out to sea, by dumping 80 kilos of dry ice into its path. But instead of dissipating it turned and gathered strength damaging the state of Georgia. The aim of the project was to create rain in arid regions and change the force of hurricanes. The project started with Vincent Schaefer, meteorologist from General Electric looking at methods to prevent aircraft icing. Lawsuits were threatened and GE pulled out of the project. TIME magazine said "In Savannah last week, Southern blood bubbled toward the boiling point. A Miami weatherman had hinted that last month's disastrous hurricane might have been not an act of God, but just a low Yankee trick." As pointed out the amount ice thrown into the path of a hurricane would have made little difference.

1947 Australia cloud seeding by CSIRO was first trialled using a light plane to release crushed dry ice into the clouds. Today silver iodine particles are used in cloud seeding. The extent of this activity and impact on the environment is never made a topic of open

discussion but rather it is argued that various weather modification techniques is a way to fight global warming.

1950s Arizona cloud seeding weather modification experiments. This area would become increasingly important for collaborative work with the University of Arizona.

Cloud seeding using silver

oxide: 'Exposure to dust containing relatively high levels of silver compounds such as silver nitrate or silver oxide **may cause breathing problems, lung and throat irritation and stomach pain.**'

It has been suggested that minute particles in the atmosphere are not hazardous to health. However, the extent of the worldwide operations and its bioaccumulate effects and its potential to make an area more flammable has to be questioned. 'Microscopic particles of silver iodide are shot into existing clouds using land based generators or aircraft.'

Fresh air will prove far more beneficial to sick persons than medicine, and is far more essential to them than their food. They will do better, and will recover sooner, when deprived of food, than when deprived of fresh air. {CH 55.1}

1959- Québec: cloud seeding in north-eastern Ontario and north western Québec using aircraft to seed clouds with silver iodide. The outcome of this 4-year experiment on large-scale storm systems was an overall small decrease in rainfall. In Lac [Saint-Jean](#) area, Qué, residents petitioned the Québec government for vitamins for their children because of lack of sunshine. 1965 the Québec minister of natural resources ordered all rainmaking activities in the province to cease. <https://www.thecanadianencyclopedia.ca/en/article/weather-modification>

1950s Project Cumulus was a 1950s UK military experiment with the aim to bog down the movement of the enemy, increase water in rivers to stop enemy crossing and clear fog from airfields. The thing was that the whole project was carried out on the people of UK without their knowledge. After about 50 years the guardian reported on declassified documents.

"A 50-year-old radio broadcast unearthed by Radio 4 describes an aeronautical engineer and glider pilot, Alan Yates, working with Operation Cumulus at the time and flying over Bedfordshire, spraying quantities of salt. He was elated when the scientists told him this had led to a heavy downpour **50 miles away (80KM)** over Staines, in Middlesex.

I was told that the rain had been the heaviest for several years - and all out of a sky which looked summery ... there was no disguising the fact that the seedsman had said he'd make it rain, and he did. Toasts were drunk to meteorology and it was not until the BBC news bulletin [about Lynmouth] was read later on, that a stony silence fell on the company," said Mr Yates at the time.

But a 50-year-old radio broadcast unearthed by Radio 4 describes an aeronautical engineer and glider pilot, Alan Yates, working with Operation Cumulus at the time and flying over Bedfordshire, spraying quantities of salt. He was elated when the scientists told him this had led to a heavy downpour 50 miles away over Staines, in Middlesex.

The Devon village of Lynmouth disaster was officially termed "the hand of God"

The declassified documents also talk of rainmaking having a potential "to explode an atomic weapon in a seeded storm system or cloud. This would produce a far wider area of radioactive contamination than in a normal atomic explosion". The Guardian RAF Rainmakers 'caused 1952 flood.' What does Wikipedia say- conspiracy theory therefore not historically accurate and deceptive source of information.

It took 50 years after the fact, to reveal that which had previously been denied.

1958 NASA established what was formerly the National Advisory Committee for Aeronautics. NASA supports the international space station.

1958: Operation Argus The target was the ionosphere which is key to world communications.

Ionosphere

- The ionosphere is important to radio communication.
 - When solar energy is absorbed in the lower thermosphere and upper mesosphere, charged ions are formed.
 - This layer is often called the *ionosphere*.
 - Radio waves are reflected in the ionosphere.
 - Auroras take place in the ionosphere.

A diagram illustrating the ionosphere. It shows a cross-section of the Earth's atmosphere with the ionosphere layer highlighted. Radio waves are shown being reflected by the ionosphere, and auroras are depicted as colorful light displays at the top of the atmosphere.

The US (27 August to 9 September 1958 over the South Atlantic Ocean) would detonate atomic weapons in outer space, creating an artificial radiation belt in Earth's magnetic field that would supposedly fry incoming Soviet warheads in flight.

A key player in Argus was America's latest satellite, Explorer 4.

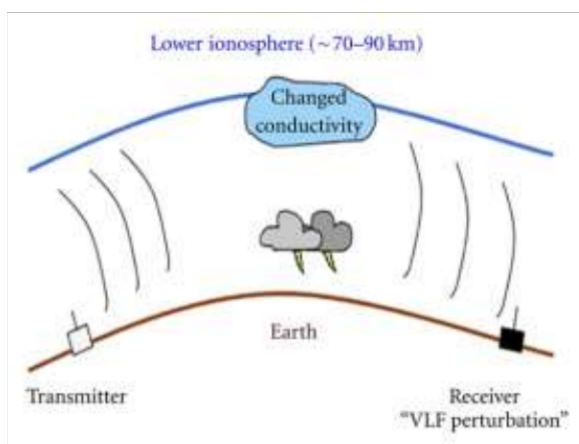

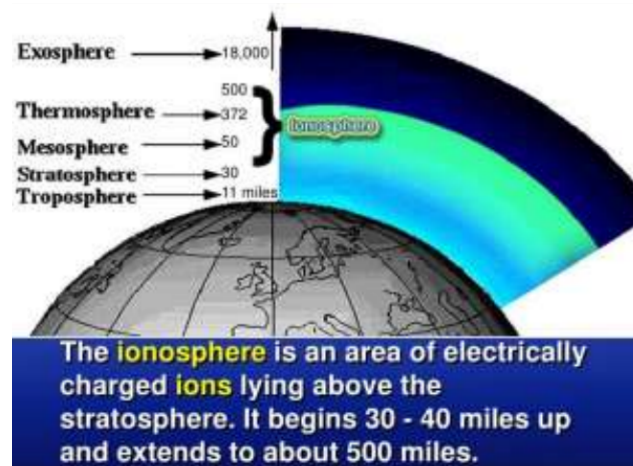

"67 nations came together to explore and study the planet that they all shared, in a spirit of complete scientific openness and collegiality. But as its builder, the physicist James Van Allen, knew quite well, Explorer 4's true purpose would be to study the effects of Argus.

The pentagon's secret was leaked and became public

The Atlantic Mark Wolverton_NOVEMBER
24, 2018

What this tell us is that a group of
scientists were present with only one
who truly understood the purpose of the
experiment.

The ionosphere is crucial to
communications and electrical energy that
makes up all life on earth. Genesis 1:3 And God said, Let there be light: and there was light.
1:4 And God saw the light, that [it was] good: and God divided the light from the darkness.
Light is electricity as first discovered by the Christian scientists Maxwell and Faraday.

God employs many unseen agencies to make
the seeds apparently thrown away, living
plants. First appear the blade, then the ear,
then the full corn in the ear. God creates the
electricity that gives life to the seed, vitality
to the blade, the ear, and the corn in the ear.

At the time of the end we are told Daniel
12:4 But thou, O Daniel, shut up the words,

and seal the book, [even] to the time of the end: many shall run to and fro, and knowledge
shall be increased. it is the means of power and forms modern communication that all
come from electricity have become available for mankind's benefit however true to man's
nature his thoughts are continually evil and opposed to God's purposes for life.

1950s Australia CSIRO 'performed cloud seeding in the Snowy Mountains, on the York
Peninsular in South Australia, in the New England district of New South Wales, and in the
Warragamba catchment area west of Sydney.'

1950s Project Skyfire: The US forestry department carried out experiments to suppress lightning that caused forest fires using a cloud seeding generator.

1950 World Meteorological Organization (WMO) became a specialised agency of the United Nations.

1950s China started weather modification: Among the **50 or so countries where cloud-seeding is practiced, China today is the most enthusiastic promoter**

1962: Project STORMFURY the US continued hurricane modification between 1962 and 1983 by flying silver oxide into the storm attempting to modify 4 hurricanes on eight different days. The idea was cloud seeding the edge of the hurricane and widening its path and lessening its impact. It was difficult to evaluate results and no significant benefits were apparent.

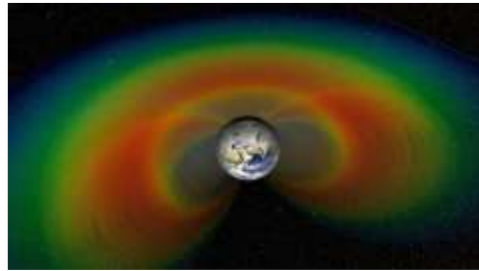

1962: Project Starfish Prime was a series of tested nuclear explosions which seriously damaged the Van Allen Belt. "One kiloton device, at a height of 60 km and one megaton and one multi-megaton, at several hundred kilometers height" (K.H.A., 29 June 1962)

One immediate effect of the blast was a huge aurora seen for thousands of kilometers around.

In Hawaii it blew out hundreds of streetlights, and caused widespread telephone outages. Other effects included electrical surges on airplanes and radio blackouts.

Through nuclear explosions they created an artificial aurora. A Van Allen radiation belt is a zone of energetic charged particles. If there were no belts, the earth would not have a magnetic field.

When they are testing the ionosphere it starts at 70km up to 300km and total disappearing at 1000KM

The pulse of electrons from the Starfish Prime detonation damaged at least six satellites (including one Soviet bird), all of which eventually failed due to the blast. Other satellite failures at the time may be linked to the explosion as well.

“Even a crude, first-generation atomic bomb ... will generate an EMP. That would be enough to ... collapse the eastern electric grid of the U.S. [if dropped from an altitude of] 30 kilometers.” [Expert warns of “weaponized weather” being used against US power grids](#)

[Friday, September 24, 2021 by Ramon Tomey](#)

1962-1965 Vatican II convened to propel the church into the modern age and unite the world churches. Pope John II inspired and convened Vatican II and Pope Francis put the path-breaking spirit and ideals of the Council into the practice. This is an important point, to realise where the revolutions and communist or ‘inclusive’ ideas are coming from. ‘Special attention should be given in Catholic universities and colleges to institutes that serve primarily the development of scientific research... even at universities that are not Catholic there should be associations and university centers under Catholic auspices in which priests, religious and laity, carefully selected and prepared, should give abiding spiritual and intellectual assistance to the youth of the university.’ [GRAVISSIMUM EDUCATIONIS PROCLAIMED BY HIS HOLINESS POPE PAUL VI ON OCTOBER 28, 1965](#)

1968 solar power satellite was detailed and patented by U.S. space pioneer Peter Glaser. Sunlight collecting solar cells in space beam down microwaves to receiving antennas ("rectennas") on earth. Countries like the UK hope to achieve their net zero emission

through space power. This could also have dangerous repercussions. Project Pandora in 1965 found low level microwave radiation had the potential to change human behaviour and thus a potential for weapons applications. [Space solar power's time may finally be coming Leonard David published November 03, 2021](#)

<https://www.space.com/space-solar-power-research-advances>

“Dropping bombs or rain?”

1963-1972: Project Popeye Vietnam war: ‘\$21.6 million rainmaking operation. Once, seven inches of rain was dumped on U.S. Special Forces camp in two hours. It is possible that the American cloud seeding compounded a deluge in August 1971 in North Vietnam that resulted in flooding that killed thousands of people.’ This was the first-time weather modification used in war. Heroin was carried back in the body bags of dead soldier to the US as reported by New York Times, and in 1971 the New York Times also reported weather warfare being used. To add, the use of agent orange and the deformities it caused and Cardinal Spellman New York Archbishop called it a Holy War or in other words a religious war in catholic interests. **Cardinal Spellman’s war: “The Pope was concerned about Communism making more gains at the expense of the Church,”** said former Jesuit Priest Malachi Martin who worked in Vietnam during the war, **“and he turned to Spellman to encourage American commitment to Vietnam.”**

The highly classified program was to extend the monsoon season over specific areas of the Ho Chi Minh Trail, in order to disrupt North Vietnamese military supplies by softening road surfaces and causing landslides. The soldiers on the ground were unaware of the use of weather manipulation.

This was reported to the public through By Seymour M. Hersh in The New York Times July 3, 1972. **‘The United States has been secretly seeding clouds over North Vietnam, Laos and South Vietnam to increase and control the rainfall for military purposes. The weather**

manipulation in Indochina, which was first tried in South Vietnam in 1963, is the first confirmed use of meteorological warfare.'

1967 Outer Space Treaty drafted under the United Nations: prohibits nuclear weapons in outer space and recognises space as a place of peaceful exploration for all nations without sovereignty. States shall not place nuclear weapons or other weapons of mass destruction in orbit or on celestial bodies or station them in outer space in any other manner.

1968 Club of Rome: Founded at Accademia dei Lincei in Rome, Italy. They consist of one hundred full members selected from current and former heads of state and government, UN administrators, high-level politicians and government officials, diplomats, scientists, economists, and business leaders from around the globe.' Their organization is to deal with 'global warming, wellbeing and humanitarian challenges' but in fact they are a crisis think tank that specializes in crisis creation for population and resource control.

The structure of the Roman Curia

While understanding the place of the Club of Rome in modern history as a world shaping think tank, understand its main influencer- that is Papal Rome with the Jesuits as the greatest intelligence gathering capabilities in the world working in all areas of society but particularly politics, education and science.

The Roman Curia is the oldest still-existing bureaucracy in the world, working for almost 2,000 years; more than 3,000 functionaries, laymen and clerics, work in the palaces of Vatican City.

At the head of this government, which has citizens throughout the world, is the State Secretariat, which oversees all the departments of the Roman Curia. Among the most important are the nine Holy Congregations, which are actually ministries.

Among the most important Congregations are: The Holy Congregation for the Doctrine of the Faith, founded in 1542 by Paul III to defend the Church against heresies such as matters of science or doctrine, (the inquisition);

Among the Secretariats one of the most active today, is that for the Union of Christians, founded in the 1960s by John XXIII, the Pope who initiated 'ecumenicism' through Vatican II.

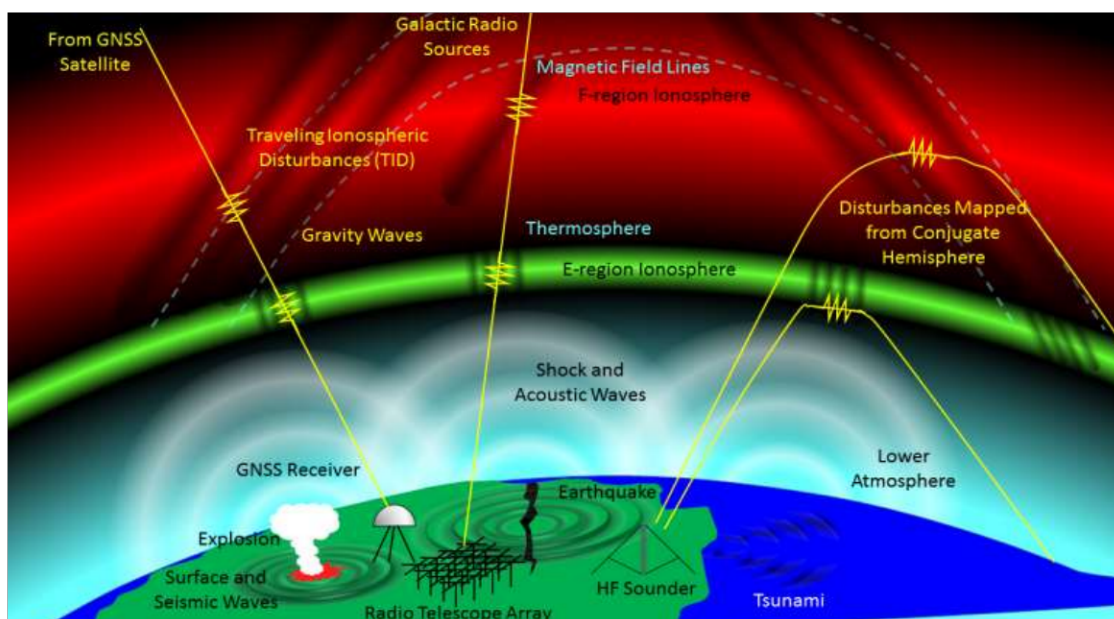

1969 Alaska: research sound rockets

(measurement rockets fly at an altitude generally between weather balloons and satellites) used to test the ionosphere at the northern aurora. The US University of Alaska was already established and in 1946 congress agreed on creation of the Geophysical Institute and by 1965 become the first university owned rocket range in the world to study the aurora. The Poker Flat

Research Range was built in 1968 on 5000 acres. Nuclear weapons had a big role as to the reason Poker Flat was built in less than a year by Alaskan scientists, engineers, technicians and students. The high altitude of this site has an advantage to study the ionosphere with aurora directly overhead. Rockets were flown into the ionosphere to test electrical disturbance first launched in 1969. It is a NASA launch site today with more than 1800 launches to study the ionosphere. Typically, the rocket takes a 16-minute flight into the upper atmosphere flying through the auroral substorm before coming down in the Arctic Ocean. Fort Churchill, Canada was an almost identical facility established for rocket launches and the study of the Northern aurora. The complex was first built in 1954 by the Canadian Army's Defence Research Board, shut down and then reopened in 1959 as a joint US military cooperation with the Canadian government. It now is educational facility open to the public.

1969/1970 Project Nile Blue CIA cloud seed near Cuba causing erratic climate with intent to fail sugar cane crop with economic and political harm. “The Central Intelligence Agency and the Pentagon cooperated in a program to seed clouds near Cuba so that they would drop their rain before reaching the island, thus causing a drought.”

<https://www.nytimes.com/1976/04/17/archives/war-of-the-weathers.html>

Notice that cloud seeding used to cause flood or drought and was never with definite outcomes.

1970/USSR15 higher education institutions were training specialists with advanced hydrometeorological education: The Leningrad and Odessa hydrometeorological institutes, Moscow University, Voronezh, Far Eastern (Vladivostok), Irkutsk, Kazan, Kiev, Perm, Saratov, Tomsk, Kazakh (Alma Ata), Tashkent, and Tbilisi universities, and the admiral S.O Makarov Higher Arctic Nautical School in Leningrad. More than 8,000 students were enrolled in these higher education institutions in hydrometeorological specialties.

The training of specialised hydrometeorologists in other countries as well as the USSR is the concern of the state and is conducted at universities (for example Sofia, Budapest, Berlin, Leipzig, Prague, Bratislava, Warsaw, Belgrade, Zagreb, Bucharest and Ulan Bator.) [The Great Soviet Encyclopedia 1979.](#)

1970 Zbigniew Brzezinski National Security Advisor/ trilateral commission with Jimmy Carter: ‘technology will make available to the leaders of major nations, techniques for conducting secret warfare, of which only a bare minimum of the security forces need be appraised.....techniques of weather modification could be employed to produce prolonged periods of drought or storm.’

1970 The Gaia movement formed: an extension of the age of Aquarian movement, inspired by occultist Alice Bailey. Together with the Lucis Trust (or Lucifer trust) and leading free masons and a Jesuit led Vatican, we have the spiritual guides for the United Nations.

Gaia is a form of pantheism. God is in all nature. 'The Gaia theory is another New Age idea that springs up every so often in science curriculum. This is the idea that the Earth is a spiritual entity, that all life on the planet is part of that entity — like cells in a global brain. For instance, I came across an outdoor activity in which children were taught that trees had spirits we could talk to. At the top of the student worksheet the activity was titled "We are one with nature."

Late 1970s Project Stormfury came to Australia from the US in an attempt to weaken tropical cyclones by flying aircraft into them and seeding with silver iodide.

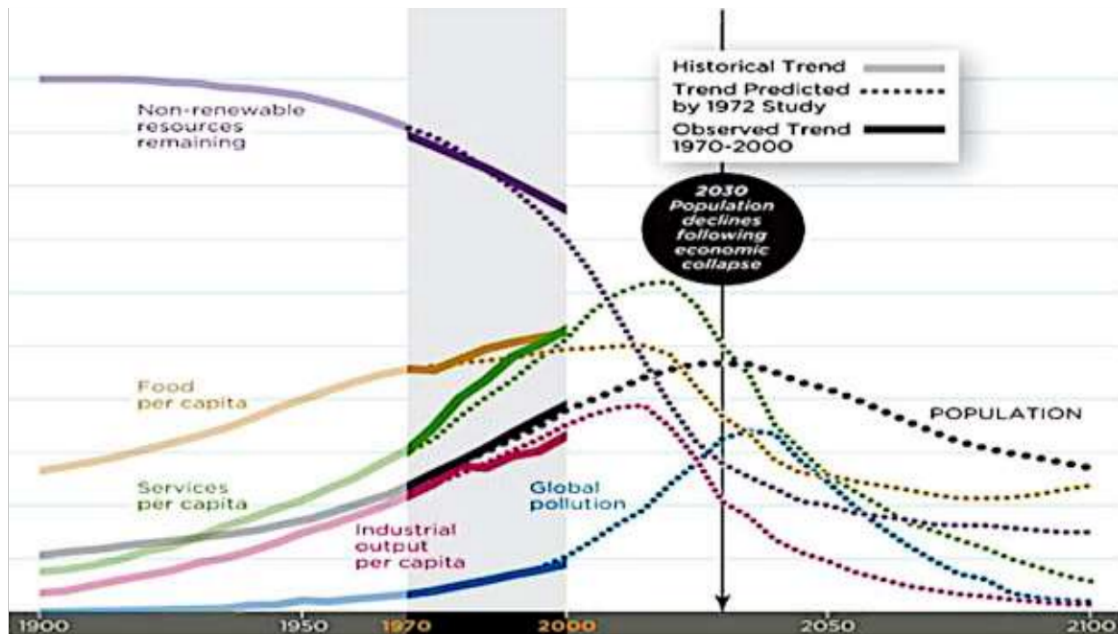

1972 The first major United Nations Environmental

Conference Stockholm, Sweden. Maurice Strong Canadian oil billionaire, found a connection with the Treasurer of the UN himself, Noah Monod who introduced Strong to David Rockefeller. He became the pioneer of sustainable development for the UN leading the way in UN address in 1972.

'This led to the formation of UN Environment Program with Maurice Strong at its head. Later, as the UNEP boss he organised the first international expert group meeting on climate change.' [Quadrant online Maurice Strong, Climate Crook 2nd December 2015 https://quadrant.org.au/opinion/doomed-planet/2015/12/discovering-maurice-strong/](https://quadrant.org.au/opinion/doomed-planet/2015/12/discovering-maurice-strong/)

1972 Club of Rome, 'The Limits to Growth' publication details a computer model to show that continued capitalist growth and its strain on resources is unsustainable beyond the year 2100. The author Aurelio Peccei of the Club of Rome is a fanatical advocate of population reduction.

'The Limits to Growth' states economic growth could not continue indefinitely because of resource depletion. The MIT computer team fed data into a global computer model and then tested the behaviour of the model under several sets of assumptions to determine alternative patterns for mankind's future. The following year reports of future oil shortages would add attention to this work. In the 1970s the crisis of the future was depleting resources of world oil.

The screenshot shows the website of 'The Club of Rome'. The header includes the Club of Rome logo and navigation links: IMPACT HUBS, PUBLICATIONS, NEWS, and ABOUT US. The main banner features a quote by David Korten: "The defining challenge of our time is envisioning a world of material sufficiency and spiritual abundance for 7.8+ billion people on a thriving, finite living Earth." Below the banner, there are five 'IMPACT HUBS' represented by colorful icons and text: Emerging New Civilisations, Planetary Emergency, Reframing Economics, Rethinking Finance, and Youth Leadership & Intergenerational Dialogues.

1973 New York Times quote from Ted Turner (Club of Rome), 'The social experiment in China under Chairman Mao's leadership is one of the most important and successful in human history'. This is a reoccurring comment such as Justin Trudeau, being asked the question which country he admires most and why? He answers China's regime 'a dictatorship where you can do whatever you wanted.'

1974, US and USSR agreed to hold bilateral discussions on measures to overcome the danger of the use of environmental modification techniques for military purposes. The USSR was studying hail suppression and precipitation stimulation and Soviet scientists have begun research on the lightning suppression, the dissipation of convective clouds, and the use of heat for the dissipation of warm fog and stratus.

[Survey of weather modification in Soviet Union:1973 Louis J. Battan University of Arizona](#)

1974 Air Force report JNLWD John B. Alexander a retired United States Army colonel known as a leading advocate for the development of non-lethal weapons stated 'weather will play a strategic role in future conflicts.'

Some "non-lethal" weapons, such as defoliants, soil destabilizers, and weather modification, manipulate parts of the Earth's biota or atmosphere to achieve a military purpose and thus could be considered environmental modification techniques.' 1999 The International Legal Implications of "Non-Lethal" Weapons David P. Fidler 1999 Michigan Journal of international law. The point is the ineffectiveness of the Geneva convention to prevent future weather modification techniques for war.

Genesis 6:5 And God saw that the wickedness of man [was] great in the earth, and [that] every imagination of the thoughts of his heart [was] only evil continually. 6:6 And it repented the LORD that he had made man on the earth, and it grieved him at his heart. 6:7 And the LORD said, I will destroy man whom I have created from the face of the earth; both man, and beast, and the creeping thing, and the fowls of the air; for it repenteth me that I have made them. 6:8 But Noah found grace in the eyes of the LORD.

1975 Lima declaration and Plan of Action on industrial development and cooperation

(GATT agreement), called for the redistribution of world industry so that developing countries would have 25% of manufacturing by the year 2000. The new economic order is mentioned 21 times in the Lima agreement. 'The Lima Declaration calls upon the developed countries to eliminate barriers to trade with developing countries and encourage their manufactured exports. They are asked to 'restructure' their industries in order to deploy production capacity to developing countries and to expand technical assistance programmes.' Australia has lost more than 90% of their Industries to third world countries leaving Australia short of technology, manufacturing and jobs. 'The Australian delegation has supported the Declaration and Plan of Action because of the aspirations it embodies for a fairer, more co-operative and more progressive world order.' In 1986 Mr Barry Jones – The Australian Minister for Industry, Technology and Commerce. Who has such long term vision

and power to influence such a plan? Daniel 7:8 7:8 I considered the horns, and, behold, there came up among them another little horn, before whom there were three of the first horns plucked up by the roots: and, behold, in this horn [were] eyes like the eyes of man, and a mouth speaking great things.

1976 the US declaration of global interdependence signed in line with United Nations

sustainability global objectives: It reads 'When in the course of history the threat of extinction confronts mankind, it is necessary for the people of the United States to declare their interdependence with the people of all nations and to embrace those principles and build those institutions which will enable mankind to survive and civilization to flourish. Two centuries ago, our forefathers brought forth a new nation; now we must join with others to bring forth a **new world order**.' Independence hall after much debate became a UNESCO world heritage site. The committee did not what to endorse the US constitution as declared by the nation's founders.

They do not see that if a Protestant government sacrifices the principles that have made them a free, **independent nation, and through legislation brings into the Constitution principles that will propagate papal falsehood and papal delusion**, they are plunging into the Roman horrors of the Dark Ages.--RH Extra, Dec. 11, 1888.

Those who are yielding to the passion for confederation are working out the plans of the enemy. The cause will be followed by the effect. {Mar 138.2}

1976 UN habitat one conference: "Private land ownership is a principal instrument of accumulation and concentration of wealth and therefore contributes to social injustice. Land cannot be treated as an ordinary asset, controlled by individuals and subject to the pressures and inefficiencies of the market."

Pope Pius IX, in his Encyclical Letter of August 15, 1854, said: 'The absurd and erroneous doctrines or ravings in defense of liberty of conscience are a most pestilential error--a pest, of all others, most to be dreaded in a state.' The same pope, in his Encyclical Letter of December 8, 1864, anathematized 'those who assert the liberty of conscience and of

religious worship,' also 'all such as maintain that the church may not employ force.' {GC 564.5} Liberty of conscious is the basis for Protestantism, the separation of church and state and personal wealth creation that was the basis and power foundations for the United States. To this end Rome has sort to undermine and redirect this power and very successfully for its own use. Personal wealth creation and land ownership was something that the Vatican through the United Nations intend to stop. Climate change is their means of achieving that objective.

1977 Geneva: International treaty to ban Weather modification techniques for the purposes of inducing damage or destruction; The **Environmental Modification Convention (ENMOD)**, formally the **Convention on the Prohibition of Military or Any Other Hostile Use of Environmental Modification Techniques**. The US was foremost to bring everyone to the table as they had been exposed by the media of using weather modification in the Vietnam war. The treaty went into effect 1978. The Convention on Biological Diversity of 2010 followed would also ban some forms of weather modification or geoengineering.
<https://2009-2017.state.gov/t/isn/4783.htm>

This is similar to **Biological Weapons Convention (BWC)** which went into effect 1975. If we have our eyes open, we will realize by now that bioweapons research continued by the US and was carried out in cooperation with other nations including China as revealed by Eco health alliance connections between Fauci (director of the National Institute of Allergy and Infectious Diseases) and the US and China. The term Gain of function was to give a new virus a gained function such as being transmissible to humans.

1978 Maurice Strong buys 'Baca' from the Colorado Land and Cattle Company, bought from Adnan Khashoggi, an arms dealer with connections to the Bin Laden family. A 200,000-acre cattle property, with vast underground water systems. He wanted to exploit the water for commercial use but was stopped by the locals who were concerned about environmental damage. The valley in which the Baca establishment is located is also traditional home for various Navajo tribes. They believe that their ancestors were led underground here by "Ant

People” and according to Navajo tradition they were **warned of a coming cataclysm by “sky katchinas” (sky spirits).**

Maurice Strong was an occultist and had been told by a mystic. *‘The Baca would become the centre for a new planetary order which would evolve from the economic collapse and environmental catastrophes that would sweep the globe in the years to come.’*

Maurice strong formed the Manitou Foundation, a New Age institution located at the Baca ranch. At the Baca ranch there is a circular temple devoted to the world’s mystical and religious movements.’ [Meet Maurice Strong:](#)

[Globalist, Oilgarch, "Environmentalist" Corbett 02/01/2016](#)

1978 GPS Global Positioning System (GPS), originally Navstar GPS, a satellite-based radionavigation

1978 -1986, satellite solar-power system (SSPS): US Congress authorized the Department of Energy (DoE) and NASA to jointly investigate the concept of generating electricity from space.

1979 the first climate change convention sponsored by World Meteorological Organisation (WMO) which is a specialized agency of the United Nations.

1979, the NEXRAD Joint System Program Office (JSPO) was formed to move forward with the development and deployment of the proposed NEXRAD (**WSR-88D**) radar network.

Some are questioning the ability of this grid to steer hurricanes but there is no documentation to substantiate this. Below you can see how this network covers the USA.

Radar systems include-

NEXRAD Next Generation radar (more powerful radar with 'pencil beam' but the ability to modify weather is unconfirmed)

TDWR Terminal Doppler Weather Radar

JSS Joint Surveillance System

IOOS Integrated Ocean Observing System

WEATHER MODIFICATION OPERATIONS WITH NEXRAD LEVEL-II DATA AND PRODUCTS

Plains, TX

1. INTRODUCTION

Operations for weather modification field programs are highly dependent on timely and accurate radar information. The quality of that radar information can impact the success of weather modification missions. The Oklahoma Water Resources Board (OWRB) and the Texas Weather Modification Association (TWMA) have partnered with Weather Decision Technologies to develop a decision support system for use in weather modification field operations.

2. BACKGROUND

The Oklahoma Weather Modification Program (OWMP) began in 1996 as an operational water management and hail suppression program and ran through 2001. Due to financial restraints, only two 5-cm radars (C-Band) were employed to cover the OWMP's target area comprised of the entire state. After reviewing Oklahoma's weather modification activities, Kuhnert et al. (2000) recommended the utilization of 10-cm radar data (S-Band) in addition to other state-of-the-science weather forecasting technologies to enhance operations in Oklahoma.

The operational cloud seeding programs of Texas since the late 1990s, have made extensive use of TITAN-equipped C-band radars to conduct project operations and for subsequent evaluation. The target areas of seven rain enhancement projects in 1999 totaled close to 36 million acres (Bomar, 1999). These project radars suffered from problems including attenuation of the beam in heavy rain and ground clutter. Also, none of the projects operated their radars around-the-clock, making it impossible to measure accurate rainfall amounts during the project season (Woodley, et al. 2001).

3. DECISION SUPPORT SYSTEM

The TWMA, OWRB and WDT have designed a Hydromet Decision Support System (HDSS) to support weather modification field operations in Texas and Oklahoma. The system depends on the NEXRAD wideband or Level-II data, the highest resolution data produced by the national network of S-Band radars. The WDT HDSS system produces products for display in an interactive web-based display (Figure 1). The HDSS generates products such as reflectivity fields at constant temperature levels, time height trends of reflectivity within storms and quantitative precipitation estimates for various time periods. The web-based display allows multiple users to view the products simultaneously at various physical locations, making coordination more efficient.

3.1 3D Mosaic

For several years the National Severe Storms Laboratory (NSSL) has been developing a 3D Radar Mosaic capability. This sophisticated application cleans up single site volumetric data in preparation for mosaicking the data to a grid covering an arbitrary domain. The result is a very clean, very timely 3D grid of radar data.

As Level-II data began to become available for research through the CRAFT network and then for commercial use through the NWS, the 3D Mosaic capability has evolved and improved. The NEXRAD Level II data are now available for over 130 radars in the CONUS. Weather Decision Technologies, Inc. has licensed this 3D Mosaic capability from the University of Oklahoma and NSSL. WDT has since implemented a 3D Mosaic domain over Oklahoma and Texas to support weather modification operations in both Oklahoma and Texas.

1980s Mesoscale Lightning Experiment:

NASA's Marshall Space Flight Centre, the State University of New York at Albany, and the New Mexico Institute of Mining and Technology at Socorro collaborated in lightening experiments to learn about atmospheric electricity in relation to storm

development. Lightning was observed in the stratosphere above storms. The shuttle was equipped with optical and electrical resting equipment. It was also used to punch holes in the ionosphere and measure its effects on electrical disturbance. "The 1994 Sprites campaign and the video titled "Red Sprites and Blue Jets" popularized the name sprite and provided a vocabulary of terms to describe the visual attributes. Prior to this video,

investigators used a variety of vague descriptive words to describe the individual events. Also, during the 1994 campaign, Wescott and coworkers obtained the first quantitative measurements of jets and provided the name "blue jets". A third phenomenon was discovered in a video from the STS-41 mission (October 1990) in the lower ionosphere directly above an active thunderstorm. It consisted of a large horizontal brightening several hundred kilometers across at the altitude of the airglow layer. In 1995, Lyons and associates confirmed the existence of this type of very brief brightening which they named Emissions of Light and Very Low Frequency Perturbations From Electromagnetic Pulse Sources (ELVES)." <https://earthdata.nasa.gov/>

It is ironic that an organization like NASA studied the atmosphere but at what cost and level of atmospheric pollution?

1984 Dr. Eastlund was approached by ARCO an independent American oil company in Alaska where vast gas reserves were too far away or difficult to ship to potential customers to come up with a mutual solution. Eastlund soon became president of ARCO's Production Technologies International Company in Houston, proposed using the vast Alaskan gas fields to power a huge electric generator to power a large phased array electromagnetic generator and produce a missile shield to defend the United States from missile attack by the Soviet Union. **The potential was to distort the ionosphere to disrupt global communications. Changing the upper atmosphere could produce high-altitude "drag" that could heat and deflect missiles or surround them with "high-energy electrons"**

PLASMA PATTERNS PROVIDING ELECTRIC CIRCUIT ELEMENT IN MESOCYCLONE

APPLICATIONS OF ARTIFICIALLY IONIZED PLASMA PATTERNS

- Telecommunications -mobile phones -Long haul communication
- Atmospheric Heating -**Controlled heating of specific atmospheric regions - Controlling electrical conductivity of atmosphere**
- Weather Research -**Modification of steering winds -Modification of electrical patterns- Generation of acoustic and gravitational waves**

New Methods of Heating Specific Regions of Atmosphere Proposed

Operational in All Weather (Unlike Lasers)

Artificial Generation of Acoustic and Gravitational Waves

Weather Research

Heating Source Function Can be Applied in Specific Regions at any Altitude.

Incremental Changes in Air Flow Can be Safely Applied and Results Analysed with Diagnostic Systems

"Weather modification is possible by, for example, altering upper atmosphere wind patterns or altering solar absorption patterns by constructing one or more plumes of atmospheric particles which will act as a lens or focusing device....A moving plume could also serve as a means for supplying a space station or for focusing vast amount of sunlight on selected portions of the earth."

https://libertygalaxy.com/ebooks/pdf/eastlund_lecture.pdf

1988 The Intergovernmental Panel on Climate Change (IPCC) was established by the United Nations Environment Programme (UNEP) & the World Meteorological Organization (WMO)

1990s 'Lasers were developed that could generate terawatts (trillions of watts) of power for femtoseconds (millionths of billionths of a second). These created pulses so intense that they ripped electrons from air molecules, forming channels of ionised air along the beam path.' **New Scientist** Lightning directed by laser beams **TECHNOLOGY** 28 March 2012 By **Jeff**

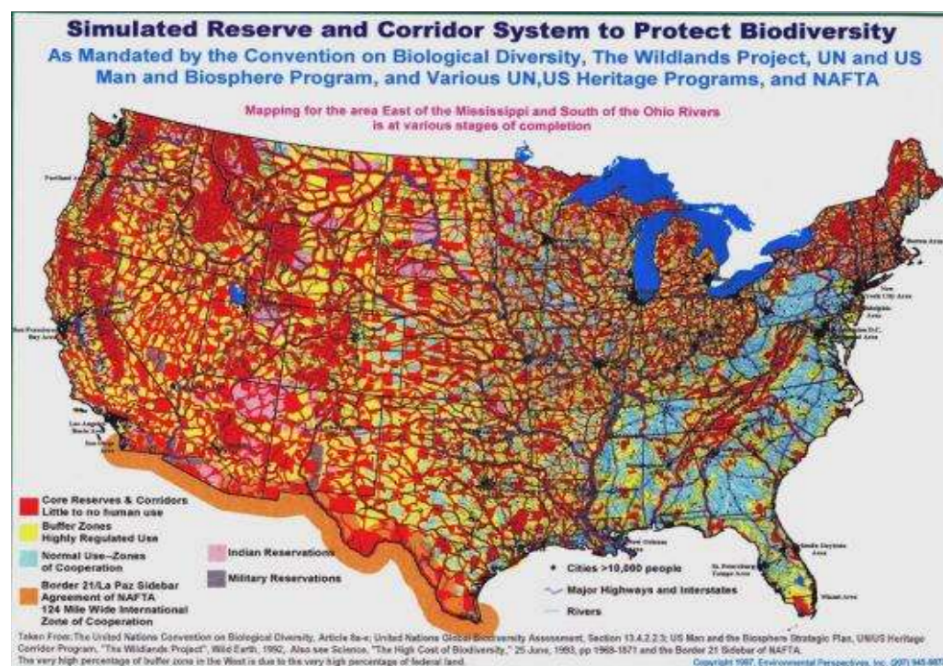

[Hecht https://www.newscientist.com/article/mg21328584-200-lightning-directed-by-laser-beams/](https://www.newscientist.com/article/mg21328584-200-lightning-directed-by-laser-beams/)

1990s construction of Stennis Space Centre test site in wetland of Mississippi for NASA on 125,000 acres

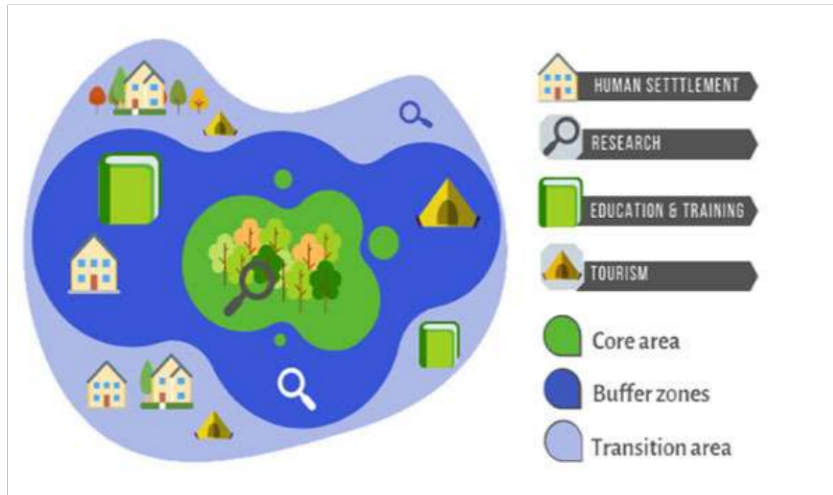

1990 ICLEI founded – Local Governments for Sustainability to implement United Nations sustainable development, provides technical consultation to local governments to meet sustainability objectives to meet agenda 21 now agenda 2030 planning guides. Under environmental concern our private right and civil right are stripped away. Formerly known as the International Council for Local Environmental Initiatives.

As ICLEI works at a local council level taking away land rights creating restricted areas to humans habitation and tourism under United Nations control while moving people from the country to the SMART cities.

Proposed ICLEI uninhabitable reserves across the USA under Obama's presidency. You see the proposal for the USA by the areas in red.

This was diminished the under the Trump administration. ICLEI was revived in the first 100 days of Biden presidency action plan. Its presence is throughout the world with

actions plans at local council level.

1990 Keys of this Blood published by Jesuit Priest Malachi Martin outlines the Vatican plan for the first dual hegemony in history with one remaining victor in the NEW World Order.

‘Willing or not, ready or not, we are all involved in an all-out, no holds barred, three-way global competition. Most of us are not competitors, however. We are the stakes. For the competition is about who will establish the first one-world system of government that has ever existed in the society of nations. It is about who will hold and wield the dual power of authority and control over each of us as individuals and over all of us together as a community; over the entire six billion people expected by demographers to inhabit the earth by early in the third millennium.

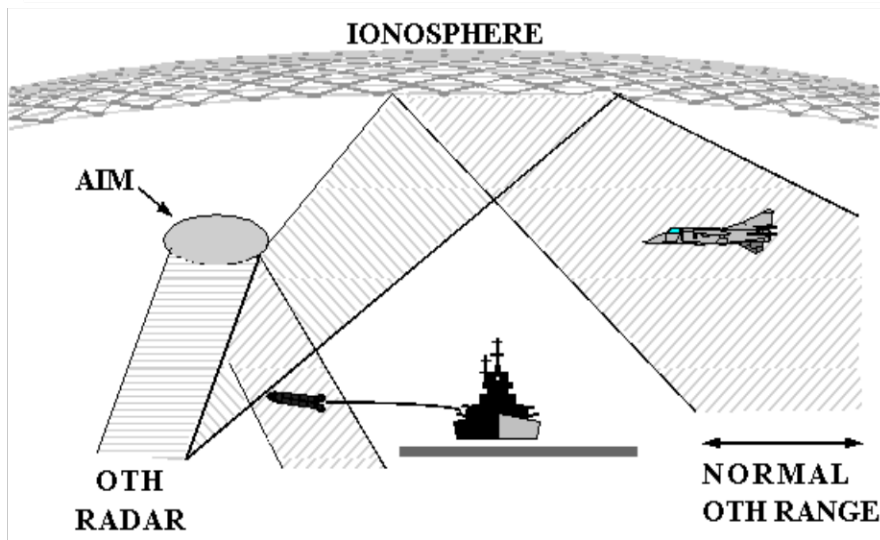

The competition is all-out because, now that it has started, there is no way it can be reversed or called off.

No holds are barred because, once the competition has been decided, the world and all that's in it - our way of life as individuals and as citizens of the nations; our families and our jobs; our trade and commerce and money; our educational systems and our religions and our cultures; even the badges of our national identity, which of us have always taken for granted - all will have been powerfully and radically altered forever. No one can be exempted from its effects. No sector of our lives will remain untouched.

The competition began and continues as a three-way affair because that is the number of rivals with sufficient resources to establish and maintain a new world order.’

2 books have the same end scenario as well as 2 organisations view the same political religious outcome though at opposite ends of the spectrum- but there is only one correct view of Bible prophecy through the lens of the SDA church because of it being a commandment keeping church, also the book Great Controversy published in 1888 holds the same end scenario and 'Keys of this Blood' as quoted above.

1990 Generation of an Artificial Ionospheric Mirror (AIM), or a plasma layer in the atmosphere. The AIM is used like the ionosphere to reflect RF energy over great distances.

<https://patents.google.com/patent/US5041834A/en>

1991 Club of Rome comments: "The First Global Revolution" Alexander King and Bertrand Schneider , one of the founders of the "Club of Rome" writes: *'The common enemy of humanity is man. In searching for a new enemy to unite us, we came up with the idea that pollution, the threat of global warming, water shortages, famine and the like would fit the bill. All these dangers are caused by human intervention, and it is only through changed attitudes and behavior that they can be overcome. The real enemy then, is humanity itself.'* first report to the club,

Other statements

“Individual rights will have to take a back seat to the collective.” – Harvey Ruvin, voice chairman of the former International Council for Local Environmental Initiatives, now known as ICLEI-Local Governments for Sustainability, an association of cities and local governments dedicated to sustainable development.

1992 The first installation of a NEXRAD system for operational use in daily forecasting was in **Sterling, Virginia**. IS NEXRAD capable of affecting weather patterns as suggested by radar imaging? It certainly is part of weather modification system for detection and computerised tracking of the weather.

1992 Rio summit/climate change convention- Agenda 21 how solve world problems to achieve a green economy for sustainable development including incentives for the private sector investing in clean energy. Signatures brought to the table in a hope to commit to carbon reduction. Sustainable development would be the key phrase into the future.

The Future we Want

Millennium Development Goals	Sustainable Development Goals
<ul style="list-style-type: none">• Eradicate extreme poverty and hunger• Achieve universal primary education• Promote gender equality and empower women• Reduce child mortality• Improve maternal health• Combat HIV/AIDS, malaria and other diseases• Ensuring environmental sustainability• Establish a global partnership for development	<ul style="list-style-type: none">• Food security :production, access and nutrition• Integrated water management• Energy for sustainable development• Sustainable and resilient cities• Healthy and productive oceans• Enhanced capacity of natural systems• Improved efficiency and sustainability in resource use• Enhanced employment and livelihood security

SDG addresses holistically social, economic and environmental aspects of sustainable development in order to eradicate poverty but with particular stress on protection of resources and the importance of the environment.

J. Gary Lawrence, adviser to president Clinton's Council on Sustainable Development,
“Participating in a UN advocated planning process would very likely bring out many of the
conspiracy fixated groups and individuals in our society. **This segment of our society who
fear one world government and UN invasion through which our individual freedoms will be
stripped away would actively work to defeat any elected official who joined the conspiracy
by undertaking Agenda 21 so we will call our process something else. We will call it
comprehensive planning or growth management or SMART growth. We ended up with
sustainable development.”**

**Agenda 21 is about taking populations from rural areas and concentrating the
population in concentrated city areas- smart cities.**
